Harcum,2012-04-19 This book combats the anti religious sentiment of some psychologists It argues that Christians do not have to give up their religious faith to keep the contributions of science A science compatible with religion accepts that human beings have freedom of will to select behaviors and that all methods of studying human behavior are acceptable Both of these premises are accepted by a modern view of science which recognizes its inherent subjectivity E Rae Harcum explicitly asserts the important role of spirituality in psychology especially in psychotherapy The book confronts the relation between the human body and its non material parts the mind and spirit and provides a way of looking at these metaphysical issues A Psychology for People of God promotes the need of the Christian to love and to care for his or her fellows After all fitness for survival entails the willingness to serve Using Psychology in the Classroom Stephen James Minton,2012-02-21

Psychology can be applied to understanding a range of current issues and topics in teaching and educational practice Starting with the question what is psychology and a topical overview of child and adolescent development Stephen James Minton moves on to discuss seven areas of contemporary concern in education showing how psychological approaches can help teachers in key areas of practice Areas covered include the self self esteem and self esteem enhancement intelligence learning styles and educational attainment positive teaching co operative learning and assertive discipline special educational needs preventing and countering bullying and cyber bullying dealing with prejudice stress and stress management This detailed text will be vital reading for all those studying psychology and applied psychology in primary and secondary teaching degree programmes Constant links between theory and practice also make it a valuable read for practitioners reflecting on their approach to common classroom scenarios Stephen James Minton is a lecturer in Psychology of Education at Trinity College Dublin **The Psychology of Friendship and Enmity** Rom Harré,Fathali M.

Research Methods in Language Acquisition Barbara Lust, Maria Blume, 2016-11-07 Language acquisition research is challenging the intricate behavioral and cognitive foundations of speech are difficult to measure objectively The audible components of speech however are quantifiable and thus provide crucial data This practical guide synthesizes the authors decades of experience into a comprehensive set of tools that will allow students and early career researchers in the field to design and conduct rigorous studies that produce reliable and valid speech data and interpretations The authors thoroughly review specific techniques for obtaining qualitative and quantitative speech data including how to tailor the testing environments for optimal results They explore observational tasks for collecting natural speech and experimental tasks for eliciting specific types of speech Language comprehension tasks are also reviewed so researchers can study participants interpretations of speech and conceptualizations of grammar Most tasks are oriented towards children but special considerations for infants are also reviewed as well as multilingual children Chapters also provide strategies for transcribing and coding raw speech data into reliable data sets that can be scientifically analyzed Furthermore they investigate the intricacies of interpretation so that researchers can make empirically sound inferences from their data and avoid common pitfalls that can lead to unscientific conclusions

Principles of Noology Seng-Beng Ho, 2016-06-29 The idea of this book is to establish a new scientific discipline noology under which a set of fundamental

principles are proposed for the characterization of both naturally occurring and artificial intelligent systems The methodology adopted in Principles of Noology for the characterization of intelligent systems or noological systems is a computational one much like that of AI Many AI devices such as predicate logic representations search mechanisms heuristics and computational learning mechanisms are employed but they are recast in a totally new framework for the characterization of noological systems The computational approach in this book provides a quantitative and high resolution understanding of noological processes and at the same time the principles and methodologies formulated are directly implementable in AI systems In contrast to traditional AI that ignores motivational and affective processes under the paradigm of noology motivational and affective processes are central to the functioning of noological systems and their roles in noological processes are elucidated in detailed computational terms In addition a number of novel representational and learning mechanisms are proposed and ample examples and computer simulations are provided to show their applications These include rapid effective causal learning a novel learning mechanism that allows an AI noological system to learn causality with a small number of training instances learning of scripts that enables knowledge chunking and rapid problem solving and learning of heuristics that further accelerates problem solving Semantic grounding allows an AI noological system to truly understand the meaning of the knowledge it encodes This issue is extensively explored This is a highly informative book providing novel and deep insights into intelligent systems which is particularly relevant to both researchers and students of AI and the cognitive sciences

Dictionary of Criminology Mwene Mushanga, 2011-12-29 In professional disciplines just as in academics the definition of basic concepts is fundamental for adequate understanding of issues A dictionary of criminology may be regarded as irrelevant for the simple reason that criminology cannot be said to constitute an academic or professional discipline in East Africa But this dictionary is not limited to criminological or sociological concepts alone Just like any academic discipline it covers other areas of social studies such as law economics and politics The dictionary covers some areas that to the average reader are least related to law and crime but to the specialist even the least likely entry like race tribe and democracy is in some remote way linked to the incidence of crime delinquency or deviance
