atmosphere by, for weather, and study climate patterns.

Latitude

Latitude is the distance (measured in degrees) of a location north or south of the equator. Places closest to the equator are generally warmer because they get more direct sunlight. Different climates correspond to specific latitude regions.

Altitude

Height above sea level impacts climate. There are fewer molecules of air the higher up you go. So, there are fewer molecules to absorb heat and temperatures are cooler at higher elevations. Temperatures go down about 3.3°F for every 1,000 feet or 6°C for every 1,000 meter increase in elevation.
