Global food security Great Britain: Parliament: House of Commons: International Development Committee, 2013-06-04. The International Development Committee calls for concerted action to curb food wastage in the UK and for expansion of DFID's bilateral nutrition programmes with a particular focus on pregnancy and early years as part of wider efforts to improve global food security. There is scope for the Government to launch a national consumer campaign to reduce domestic food waste also setting national targets to curb food waste within the UK food production and retail sectors. Agriculturally produced biofuels are having a major detrimental impact on global food security by driving higher and more volatile food prices. EU targets requiring 10 per cent of transport energy to be drawn from renewable sources by 2020 are likely to cause dramatic food price increases and the Government should revise its domestic Renewable Transport Fuel Obligation to specifically exclude agriculturally produced biofuels. Looking at the impact of rising world population, the Committee praises DFID's significant efforts to meet the considerable unmet need for contraception in many developing nations and urges the UK government to maintain a keen focus on women's reproductive rights within its development assistance programmes. MPs also flag the longer term barriers to development posed by systematic undernutrition. The Committee expresses concern that large corporations are buying up large areas of land in many developing countries previously farmed by smallholders. UK domiciled corporations should be required to be transparent about land deals. Lastly, MPs focus on the key role that smallholder farmers will play in feeding a growing global population and in reducing rural poverty.

Potential Yields of Major Crops for Chinese and Global Food Security Under Climate Change Chengzhi Cai, Wenfang Cao, 2022-09-27. This book analyzes potential yields of six major food crops: rice, wheat, maize, potato, soybean, and rapeseed worldwide using both qualitative and quantitative approaches to study both China's and global food security under climate change. Firstly, it reviews previous studies on potential yields of rice, wheat, maize, potato, soybean, and rapeseed worldwide to provide a detailed information of studying on China's and global food security based on the products supply and demand of these crops. Secondly, average and top national yields of rice, wheat, maize, potato, soybean, and rapeseed since 1961 on global scale are employed to analyze their temporal and spatial variation trends and potential limits. Thirdly, the effects of global warming in climate change on both average and top yields of rice, wheat, maize, potato, soybean, and rapeseed since 1961 at global level are analyzed using regression model and their differences between average and top yields among these crops are identified and compared. Fourthly, the yields and per capita quantity of rice, wheat, maize, potato, soybean, and rapeseed in major producer countries and

the world are analyzed to assess the situation and trend of international trade for the products of these crops respectively Fifthly potential yields of rice wheat maize potato soybean and rapeseed worldwide by 2030 are projected using both trend regressed models and ARIMA models to estimate the per capita quantity of these crops based on the projection of world population and assess the status of Chinese and global food security in that future Finally it provides policy implications and advice on food security for China and the world directing food production by 2030 under climate change **Climate**

Lobell,Marshall Burke,2009-12-21 Roughly a billion people around the world continue to live in state of chronic hunger and food insecurity Unfortunately efforts to improve their livelihoods must now unfold in the context of a rapidly changing climate in which warming temperatures and changing rainfall regimes could threaten the basic productivity of the agricultural systems on which most of the world s poor directly depend But whether climate change represents a minor impediment or an existential threat to development is an area of substantial controversy with different conclusions wrought from different methodologies and based on different data This book aims to resolve some of the controversy by exploring and comparing the different methodologies and data that scientists use to understand climate s effects on food security In explains the nature of the climate threat the ways in which crops and farmers might respond and the potential role for public and private investment to help agriculture adapt to a warmer world This broader understanding should prove useful to both scientists charged with quantifying climate threats and policy makers responsible for crucial decisions about how to respond The book is especially suitable as a companion to an interdisciplinary undergraduate or graduate level class
