## Chapter 1

### Problem 1.1

A nucleus, originally at rest, decays radioactively by emitting an electron of momentum 1.73 MeV/c, and at right angles to the direction of the electron a neutrino with momentum 1.00 MeV/c. (The MeV (million electron volt) is a unit of energy, used in modern physics, equal to  $1.60 \times 10^{-6}$  erg. Correspondingly, MeV/c is a unit of linear momentum equal to  $5.34 \times 10^{-17}$  gm cm/sec.) In what direction does the nucleus recoil? What is its momentum in MeV/c? If the mass of the residual nucleus is  $3.90 \times 10^{-22}$  gm, what is its kinetic energy, in electron volts?

Place the nucleus at the origin, and suppose the electron is emitted in the positive  $y$  direction, and the neutrino in the positive  $x$  direction. Then the resultant of the electron and neutrino momenta has magnitude

$$|\mathbf{p}_{e+\nu}| = \sqrt{(1.73)^2 + 1^2} = 2 \text{ MeV}/c,$$

and its direction makes an angle

$$\theta = \tan^{-1} \frac{1.73}{1} = 60^\circ$$

with the  $x$  axis. The nucleus must acquire a momentum of equal magnitude and directed in the opposite direction. The kinetic energy of the nucleus is

$$T = \frac{p^2}{2m} = \frac{4 \text{ MeV}^2 c^{-2}}{2 \cdot 3.9 \cdot 10^{-22} \text{ gm}} \cdot \frac{1.73 \cdot 10^{-27} \text{ gm}}{1 \text{ MeV} c^{-2}} = 9.1 \text{ eV}$$

This is much smaller than the nucleus rest energy of several hundred GeV, so the non relativistic approximation is justified.

**A History of Arabic Astronomy** George Saliba, 1995-07 A History of Arabic Astronomy is a comprehensive survey of Arabic planetary theories from the eleventh century to the fifteenth century based on recent manuscript discoveries George Saliba argues that the medieval period often called a period of decline in Islamic intellectual history was scientifically speaking a very productive period in which astronomical theories of the highest order were produced Based on the most recent manuscript discoveries this book broadly surveys developments in Arabic planetary theories from the eleventh century to the fifteenth Taken together the primary texts and essays assembled in this book reverse traditional beliefs about the rise and fall of Arabic science demonstrating how the traditional age of decline in Arabic science was indeed a Golden Age as far as astronomy was concerned Some of the techniques and mathematical theorems developed during this period were identical to those which were employed by Copernicus in developing his own non Ptolemaic astronomy Significantly this volume will shed much needed light on the conditions under which such theories were developed in medieval Islam It clearly demonstrates the distinction that was drawn between astronomical activities and astrological ones and reveals contrary to common perceptions about medieval Islam the accommodation that was obviously reached between religion and astronomy and the degree to which astronomical planetary theories were supported and at times even financed by the religious community itself This in stark contrast to the systematic attacks leveled by the same religious community against astrology To students of European intellectual history the book reveals the technical relationship between the astronomy of the Arabs and that of Copernicus Saliba's definitive work will be of particular interest to historians of Arabic science as well as to historians of medieval and Renaissance European science
