

Building reinforced, diaphragm and wide plan freestanding walls

This Guide, for builders, designers and planners, presents rule of thumb guidance for stable construction of a range of common brick or blockwork wall types. Separate values for wall height and foundation width are given for increasing levels of exposure across the UK and solutions can be compared with complementary advice published for simple plan unreinforced walls (Good Building Guide 14).

The Guide includes notes on materials selection and good construction practice. The need for good supervision is stressed, particularly with reinforced walls, where a number of quite different building operations are involved which require careful coordination and execution.

The advice in this guide allows walls to be built up to a height of 2.5 m. Before starting you should check local planning restrictions, which may limit walls to a maximum height of 2 m or less.

Understanding Building Failures James Douglas, Bill Ransom, 2013-04-12

Building defects still continue to plague the construction industry. The lessons learned over the last forty years have not been fully applied. Many new or refurbished buildings still leak or crack. Lack of awareness by designers and installers as to the main mechanisms that trigger such failures remains a problem for the industry. Investigating and rectifying building failures form a major part of building surveyors' bread and butter work. This book provides guidance on this work for typical residential, commercial and industrial buildings with advice on how to diagnose a wide range of defects with an emphasis on evidence based practice throughout. It considers both modern and older construction methods together with new and traditional materials. The particular problems of alteration and renovation work are also discussed. The first four chapters provide information and guidance on the methodology for investigating failures: how to prepare for and conduct an investigation into a building defect and subsequently diagnose its cause in a logical manner. This fourth edition has been updated and expanded to cover the latest diagnostic procedures and research. It also includes Appendices and a new Bibliography and provides an extensive list of books on building pathology and related topics in the UK and North America. It is essential reading for all students and practitioners interested in building surveying and building conservation.

Designing Better Building Sebastian Macmillan, 2004-07-31

Design is widely recognised as the key to improving the quality of the built environment. This well illustrated book comprises 15 chapters written by leading practitioners, clients, academics and other experts and presents the latest thinking on what design quality is and how to achieve it. For design practitioners and their clients alike, the book provides evidence to justify greater focus on and investment in design. It summarises the benefits that arise from good design such as civic pride in the urban environment, the stimulation of urban

regeneration corporate identity occupant productivity and health in offices improved learning outcomes in schools better patient recovery rates in hospitals as well as reduced environmental impact And it illustrates these benefits through case study examples Eight chapters focus on case studies of exemplary buildings in particular sectors offices schools housing and hospitals and explain why and how they came to be designed and the design qualities they exhibit Heating and Water Services Design in Buildings Keith Moss, Keith J Moss, 2013-05-13 This book provides a thorough and practical coverage of design procedures with numerous examples and case studies The author has worked with open learning candidates of all ages as well with college students and university undergraduates Designing Better Buildings Sebastian Macmillan, 2004

Table of contents Structural Engineer's Pocket Book British Standards Edition Fiona Cobb, 2020-12-17 The Structural Engineer's Pocket Book British Standards Edition is the only compilation of all tables data facts and formulae needed for scheme design to British Standards by structural engineers in a handy sized format Bringing together data from many sources into a compact affordable pocketbook it saves valuable time spent tracking down information needed regularly This second edition is a companion to the more recent Eurocode third edition Although small in size this book contains the facts and figures needed for preliminary design whether in the office or on site Based on UK conventions it is split into 14 sections including geotechnics structural steel reinforced concrete masonry and timber and includes a section on sustainability covering general concepts materials actions and targets for structural engineers **Reducing carbon emissions from UK business** Great Britain: Parliament: House of Commons: Environmental Audit Committee, 2008-03-10 The Climate Change Levy package is the second biggest element in the UK Climate Change Programme and savings appear to have been significant but were strongly front end loaded and have eased off since soon after its introduction The Levy will reduce annual UK CO₂ emissions by 12.8 million tonnes by 2010 But these savings have come mainly from the effect its announcement had on raising awareness of the potential for energy savings and most of these savings were the result of actions taken before the tax actually came into operation The Levy itself has had relatively little effect on business emissions especially in the case of SMEs and large but non energy intensive organisations The Government believes that Climate Change Agreements CCAs will reduce annual CO₂ emissions by an additional 7 million tonnes by 2010 Complying with CCAs has galvanised business interest in finding energy savings and that key to this has been the incentive of the tax discount they offer The exemptions on the Climate Change Levy for green electricity and combined heat and power have had minimal effect on the construction of new renewables and CHP capacity essentially because they are worth too little money The CCL package does not impose a damaging economic burden on UK business overall and is encouraging greater resource productivity and stimulating energy efficient industries The CCL has not worked quite as expected Instead of rationally seeking to reduce their costs through increased energy efficiency businesses appear to have needed an extra stimulus to change their approach to energy use This has profound implications for climate change policy more widely If even large

companies require additional policies to drive behavioural change this must be all the more true for small businesses public bodies and private households

Design and Management of Sustainable Built Environments Running Yao,2013-03-12 Climate change is believed to be a great challenge to built environment professionals in design and management An integrated approach in delivering a sustainable built environment is desired by the built environment professional institutions The aim of this book is to provide an advanced understanding of the key subjects required for the design and management of modern built environments to meet carbon emission reduction targets In Design and Management of Sustainable Built Environments an international group of experts provide comprehensive and the most up to date knowledge covering sustainable urban and building design management and assessment The best practice case studies of the implementation of sustainable technology and management from the BRE Innovation Park are included Design and Management of Sustainable Built Environments will be of interest to urban and building designers environmental engineers and building performance assessors It will be particularly useful as a reference book for undergraduate and postgraduate students in the built environment field

Energy: Management, Supply and Conservation Clive Beggs,2012-06-25 With more and more concern being expressed over the Earth s dwindling energy resources as well as rising pollution levels the subject of energy management and conservation is becoming increasingly important Over half of all energy consumed is used in buildings so effective management of buildings whether commercial or domestic is vital This book is a comprehensive text dealing with the theory and practice of the supply of energy to consumers energy management and auditing and energy saving technology It will be a core text on courses on energy management and building services as well as updating professionals in the building sector

Heating Systems,

Plant and Control Antony R. Day, Martin S. Ratcliffe, Keith Shepherd, 2008-04-15 In many climates buildings are unable to provide comfort conditions for year round occupancy without the benefit of a heating system and most HVAC engineers will routinely be involved with issues concerning the design installation and performance of such systems Furthermore in temperate climates heating of buildings accounts for a large slice of annual carbon emissions The design of heating systems for maximum efficiency and minimum carbon emission is therefore now a matter of prime concern to all HVAC engineers The book provides an up to date review of the design engineering and control of modern heating systems Part A deals with heat generating plant While this concentrates on conventional and condensing boilers small scale combined heat and power systems and heat pumps are also discussed Part B deals with heat emitters pipe circuits and variable speed pumping hot water service optimum plant size and the vital issues of plant and system control including sequence control of multiple boilers Techniques for managing the energy use and running costs of heating systems are also discussed The authors have brought together over a half century of combined experience covering all aspects of the building services Industry to provide an up to date and comprehensive text that is both technically rigorous yet highly practical This makes the book equally relevant to the busy HVAC engineer looking for a handy practical reference the student looking to build on their basic knowledge or the researcher interested in key issues of heating system design and performance

The Business of Greening Stephen Fineman, 2017-10-19 The Business of Greening first published in 2000 debates the relationship between business and greening and the future form this relationship could take The book gives voice to industrial actors employees employers managers technical specialists regulators in the context of their organizations within industrial sectors or as part of wider institution regimes The business of greening is taken as socially constructed shaped through tensions and competing interests It produces outcomes that are sometimes unexpected sometimes hopeful These outcomes are explored by examining a range of workers including estate agents bankers bakers printers regulators in small and large corporations Contributors write from a wide range of different social sciences including sociology geography organizational science and psychology This title will be of particular interest to students and researchers of environmental and business studies and to those who shape environmental policy in government and industry
