Grab Your Copy Today **Google Earth Engine Applications** Lalit Kumar, Onesimo Mutanga, 2019-04-23 In a rapidly changing world there is an ever increasing need to monitor the Earth's resources and manage it sustainably for future generations. Earth observation from satellites is critical to provide information required for informed and timely decision making in this regard. Satellite based earth observation has advanced rapidly over the last 50 years and there is a plethora of satellite sensors imaging the Earth at finer spatial and spectral resolutions as well as high temporal resolutions. The amount of data available for any single location on the Earth is now at the petabyte scale. An ever increasing capacity and computing power is needed to handle such large datasets. The Google Earth Engine (GEE) is a cloud based computing platform that was established by Google to support such data processing. This facility allows for the storage, processing and analysis of spatial data using centralized high power computing resources, allowing scientists, researchers, hobbyists and anyone else interested in such fields to mine this data and understand the changes occurring on the Earth's surface. This book presents research that applies the Google Earth Engine in mining, storing, retrieving and processing spatial data for a variety of applications that include vegetation monitoring, cropland mapping, ecosystem assessment and gross primary productivity among others. Datasets used range from coarse spatial resolution data such as MODIS to medium resolution datasets like Worldview 2 and the studies cover the entire globe at varying spatial and temporal scales.

New Trends in Earth-Science Outreach and Engagement Jeanette L. Drake, Yekaterina Y. Kontar, Gwynne S. Rife, 2013-12-11 Perhaps just as perplexing as the biggest issues at the core of Earth science is the nature of communicating about nature itself. *New Trends in Earth Science Outreach and Engagement: The Nature of Communication* examines the processes of communication necessary in bridging the chasm between climate change and natural hazard knowledge and public opinion and policy. At this junction of science and society, 17 chapters take a proactive and prescriptive approach to communicating with the public, the media and policy makers about the importance of Earth science in everyday life. Book chapters come from some 40 authors who are geophysical scientists, social scientists, educators, scholars and professionals in the field. Bringing diverse perspectives, these authors hail from universities and research institutes, government agencies, non profit associations and corporations. They represent multiple disciplines including geosciences, education, climate science, environmental communication and public policy. They come from across the United States and around the world. Arranged into five sections, the book looks at geosciences communication in terms of: 1. Education, 2. Risk management, 3. Public discourse, 4. Engaging the public, 5. New media. From case studies and best practices to field work and innovations, experts deliver pragmatic solutions and delve into significant theories including diffusion, argumentation and constructivism to name a few. Intended for environmental professionals, researchers and educators in the geophysical and social sciences, the book emphasizes communication principles and practices within an up to the minute context of new environmental issues, new technologies and a new focus on resiliency.

A Research Guide to Cartographic Resources Eva H. Dodsworth, 2018-09-22 The interdisciplinary uses of traditional

cartographic resources and modern GIS tools allow for the analysis and discovery of information across a wide spectrum of fields. A Research Guide to Cartographic Resources navigates the numerous American and Canadian cartographic resources available in print and online offering researchers, academics, and students with information on how to locate and access the large variety of resources, new and old. Dozens of different cartographic materials are highlighted and summarized along with lists of map libraries and geospatial centers and related professional associations. A Research Guide to Cartographic Resources consists of 18 chapters, two appendices, and a detailed index that includes place names and libraries structured in a manner consistent with most reference guides, including cartographic categories such as atlases, dictionaries, gazetteers, handbooks, maps, plans, GIS data, and other related material. Almost all of the resources listed in this guide are categorized by geography, down to the county level, making efficient work of the type of material required to meet the information needs of those interested in researching place-specific cartographic-related resources. Additionally, this guide will help those interested in not only developing a comprehensive collection in these subject areas but get an understanding of what materials are being collected and housed in specific map libraries, geospatial centers, and their related websites. Of particular value are the sections that offer directories of cartographic and GIS libraries as well as comprehensive lists of geospatial datasets down to the county level. This volume combines the traditional and historical collections of cartography with the modern applications of GIS-based maps and geospatial datasets.

The Archimage's Fourth Daughter Lyndon Hardy, 2017-12-15 Briana knew she should obey her father Alodar the Archimage. She did not have any experience for the job, but adventure beckoned. How hard could it be? Quite hard, it turns out. Learning centers called colleges rather than magician palaces. The stock market erupting, volcanoes underground, aliens plotting to escape from their frigid prison. Three brothers, each with his own agenda on how best to proceed. One has a plan to destroy all native life in a very simple way.

Mapping System and Services for Pressurized Irrigation Systems - MASSPRES Lamaddalena, N., Salman, M., Pek, E., Ahmad, W., Lebdi, F., Wahaj, R., 2024-05-22 FAO's Irrigation and Drainage Paper No. 63 introduced the MASSCOTE methodology in 2007, tailored for modernizing large-scale canal irrigation systems. With global interest shifting towards pressurized pipe systems, particularly in water-scarce regions, the need for a similar methodology became apparent. Pressurized systems offer advantages like on-demand irrigation, reduced water wastage, and environmental impact. However, they require complex management due to changing water demands. To address this, FAO developed the MASSPRES approach, building on MASSCOTE's

principles Author MASSPRES aims to assess and enhance the performance of pressurized irrigation schemes introducing steps like the Rapid Appraisal Procedure RAP for system mapping Author It offers innovative methods for evaluating pressures and discharges at farm hydrants under various operating conditions replacing earlier statistical analysis approaches Author MASSPRES incorporates indicators for capacity reliability distribution equity sensitivity to change and perturbation risks into user friendly software Author Practical examples from Egypt Italy Spain and Tunisia showcase its effectiveness Author As governments seek to improve water and food production amidst increasing water scarcity adopting technologies like pressurized irrigation becomes crucial Author MASSPRES provides a systematic framework for both upgrading existing systems and designing future ones addressing the complexities of managing pressurized irrigation efficiently Author
