Sustainability assessment of concrete bridge deck designs in coastal environments using neutrosophic criteria weights Ignacio J. Navarro, Victor Yepes, Jose V. Mart, Essential infrastructures such as bridges are designed to provide a long lasting and intergenerational functionality. In those cases sustainability becomes of paramount importance when the infrastructure is exposed to aggressive environments which can jeopardise their durability and lead to significant maintenance demands. The assessment of sustainability is however often complex and uncertain. The present study assesses the sustainability performance of 16 alternative designs of a concrete bridge deck in a coastal environment on the basis of a neutrosophic group analytic hierarchy process AHP. The use of neutrosophic logic in the field of multi criteria decision making as a generalisation of the widely used fuzzy logic allows for a proper capture of the vagueness and uncertainties of the judgements emitted by the decision makers. TOPSIS technique is then used to aggregate the different sustainability criteria. From the results it is derived that only the simultaneous consideration of the economic environmental and social life cycle impacts of a design shall lead to adequate sustainable designs. Choices made based on the optimality of a design in only some of the sustainability pillars will lead to erroneous conclusions. The use of concrete with silica fume has resulted in a sustainability performance of 46.3% better than conventional concrete designs.

Handbook on Intelligent Techniques in the Educational Process Mirjana Ivanović, Aleksandra Klašnja-Miličević, Lakhmi C. Jain, 2022-06-15 Education has a substantial impact and influences on almost all sectors in modern society. Different computer supported educational systems have been developing for many decades to support and make easier teaching and learning processes on all levels of education. Influences of rapid development of Information Communication Technologies and other related disciplines on design and implementation of intelligent sophisticated educational systems are evident. Nowadays intensive development and wide applications of Artificial Intelligent techniques significantly affect the development of intelligent tutoring systems smart learning environments that incorporate virtual and augmented reality and robots. Artificial Intelligence has the potential to address some of the biggest challenges in education today but also in the future in order to establish innovative teaching and learning practices facilitated by powerful educational datamining and learning analytics. This book presents a collection of 17 chapters that bring interesting aspects of the state of the art of application of intelligent techniques in different educational processes and settings. We believe that the works presented in the book will be of great interest to readers and that will motivate them to try to enhance presented approaches and propose better and more advanced solutions.
