Compendium of Research Contracts and Reports United States. Dept. of Housing and Urban Development. Office of Policy Development and Research,1979 *Guideline: infant feeding in areas of Zika virus transmission* World Health Organization,2021-06-15 The objective of this guideline is to provide global science informed recommendations on infant feeding in areas of Zika virus transmission The primary audience of this guideline is health professionals responsible for developing national and local health protocols especially those related to infant feeding in infancy and early childhood The primary audience also includes those directly providing care to infants such as nurses general medical practitioners paediatricians managers of maternal newborn and child health programmes and relevant personnel in health ministries in all settings Lastly this guideline is also of interest to pregnant or breastfeeding women living or travelling to areas where Zika virus transmission continues This guideline aims to help WHO Member States and their partners to make science informed decisions on the appropriate actions in their efforts to achieve the Sustainable Development Goals the resolutions of the World Health Assembly on infant and young child feeding and the global targets put forward in the comprehensive

implementation plan on maternal infant and young child nutrition the global strategy for infant and young child feeding and the Zika Strategic Response Plan *Guidelines on the development of open educational resources policies* Miao, Fengchun, Mishra, Sanjaya, Orr, Dominic, Janssen, Ben, 2019-10-15 **Development Document for Effluent Limitations Guidelines and Standards for the Pulp, Paper and Paperboard and the Builders' Paper and Board Mills Point Source Categories** ,1980 **WHO recommendation on vaginal preparation with antiseptic agents for women undergoing caesarean section** ,2021-06-18 While the evidence on vaginal preparation before caesarean section was largely derived from trials using povidone iodine benefit was demonstrated overall for any antiseptic either povidone iodine or chlorhexidine gluconate versus no antiseptic Included trials used varying concentrations of chlorhexidine gluconate 0.05% to 0.25% or povidone iodine 1% to 10% and the base aqueous or alcohol was not described However the Guideline Development Group agreed that alcohol based antiseptic solutions should not be used for vaginal preparation because of concerns around irritation of mucosa This recommendation pertains to all women undergoing caesarean section regardless of their baseline risk of infectious morbidity following surgery i.e. for caesarean section in women before or during labour and women with intact or ruptured membranes Whilst available trials were not clear on the timing of vaginal preparation relative to the caesarean section the Guideline Development Group suggested that vaginal preparation should be performed as close to the start of caesarean section as possible e.g. directly following preoperative urinary bladder catheterization to minimize the woman's discomfort
