Pattern-Based Compression of Multi-Band Image Data for Landscape Analysis Wayne L. Myers,Ganapati P. Patil,2006-12-18 We offer here a non conventional approach to multivariate image structured data for which the basis is well tested but the analytical ramifications are still unfolding Although we do not formally pursue them there are several parallels with the nature of neural networks We employ a systematic set of statistical heuristics for modeling multivariate image data in a quasi perceptual manner When the human eye perceives a scene the elements of the scene are segregated heuristically into components according to similarity and dissimilarity and then the relationships among the components are interpreted Similarly we segregate or segment the scene into hierarchically organized components that are subject to subsequent statistical analysis in many modes for interpretive purposes We refer to the segregated scene segments as patterns since they provide a basis for perception of pattern Since they are also hierarchically organized we refer to them further as polypatterns This leads us to our acronym of Progressively Segmented Image Modeling As Polypatterns PSIMAPP Likewise we formalize our approach in terms of pattern processes and segmentation sequences In alignment with the terminology of image analysis we refer to our multivariate measures as being signal bands
