### Specifications (at 25 °C)

Connection type: 3 wire (neutral required)

Supply voltage: 230-240V a.c. 50Hz

Max load: 2400W (incandescent)  
2400VA (fluorescent)

Operating temperature range: 0°C to + 50°C

Programmable time delay period: 1 sec to 239 hrs

Factory setting: 10 mins

### Features

This time delay switch is capable of switching loads for any programmable time from 1 second to 239 hours and it does this with incredible accuracy without the need of a battery or supercapacitor. This accuracy is based on the timing reference used: the 50Hz frequency.

Applications include lighting, heating, air conditioning and other machinery in commercial, industrial and institutional premises with resultant economies because the devices are turned on only when they are required and can not be inadvertently left on.

The push button is illuminated for easy night time operation.

### Understanding the function of the switch by its catalogue number

### Operation

As soon as the button is pressed, the load turns on. However, timing does not start until the button is released. This is called "off-delay", and the time delay switch operates this way by default. When the time delay period expires, the load turns off.

The time delay switch can be reprogrammed so that timing starts as soon as the button is pressed, rather than when it is released. This is called "on-delay". Refer to "How to program" for how to activate "on-delay".

### Wiring

Figure 1. Normal wiring diagram

Optional momentary push buttons (HX770M or 7700M) can be connected between the Active and Control terminals. These perform the same function as the push button on the main product.

Figure 2. Fan delay timer

In this application, a Remote IRC3 time delay switch is used, and a 770M rocker switch is used in place of the momentary push button. When the switch is turned on, both the light and fan turn on. When the switch is turned off, the light will turn off immediately but the fan will keep running for the programmed delay period. Note that this will only work when the unit is set to "off-delay" (the default setting).

Figure 3. Fan delay timer with multiple lights

When multiple light switches (7555PM) must be used to control the one fan, double pole switches (7555PM) must be used, otherwise all the lights will turn on when one switch is turned on.

### Installation Note:

- 1) The maximum recommended length of the control wire to remote push buttons is 100m.
- 2) Power factor correction capacitors can be connected downstream of the time delay switch.

### WARNING

Do not megger test. Megger tester may damage unit.
