

Cardiovascular System

Chambers of the Heart:

1. **Right Atrium** - carries deoxygenated blood from the body via superior and inferior vena cava.
2. **Left Atrium** - carries oxygenated blood from the pulmonary veins.
3. **Right Ventricle** - carries blood from the right atrium and pumps it to the lungs through the pulmonary artery.
4. **Left Ventricle** - carries oxygenated blood from the lungs and pumps it into the systemic circuit through the aorta.

Valves of the Heart:

1. **Tricuspid Valve** - located on the right side of the heart.
2. **Mitral / Bicuspid Valve** - located on the left side of the heart.
3. **Pulmonic Valve** - between the right ventricle and pulmonary artery.
4. **Aortic Valve** - between the left ventricle and the aorta.

3 Layers of the Heart:

1. **Epicardium** - the outermost layer of the heart.
2. **Myocardium** - the middle layer of the heart, the contracting muscle.
3. **Endocardium** - innermost layer of the heart, lines the inner chambers and the valves.

The Heart:

It is a cone-shaped organ in the mediastinal space. Which pumps oxygenated blood into the arterial system to supply capillaries and tissue. It pumps poor oxygenated blood from the venous system through the lungs to be reoxygenated. The heart is encased in a pericardial sac, which protects it, lubes and holds about 10-20 ml of pericardial fluid. The sac has 2 layers:

1. **Parietal pericardium** - outer membrane.
 2. **Visceral pericardium** - inner membrane.
- The function of circulation is to deliver nutrients, oxygen, hormones

Blood Flow Through the Heart:

1. Blood enters the heart from the body through the superior and inferior vena cava and enters the right atrium.
2. Blood then moves through the tricuspid valve into the right ventricle chamber of the heart.
3. Then the blood moves through the pulmonary valve into the pulmonary artery.
4. The blood re-enters the heart from the lungs through the pulmonary veins, and travel into the left atrium.
5. The blood then passes through the mitral valve and into the left ventricle chamber of the heart.
6. The blood then moves through the aortic valve and into the aorta.

Electrical conduction of the heart:

SA Node: 1st pacemaker of the heart and initiates contraction at 60-100 bpm.

AV Node: 2nd pacemaker of the heart that receives impulses from the SA node initiates and sustains impulses at 40-60 bpm.

Bundle of His: It is the continuation of the AV node and branches into the bundle of his branches which goes into the purkinje fibers.

Purkinje fibers: network of conducting stands beneath the ventricular endocardium. They can act as a pacemaker when the SA and AV fail as pacemakers. It can sustain 20-40 bpm.
