Water Relationships in Foods Harry Levine,Louise Slade,2013-11-21 This book was developed from the

papers presented at a symposium on Water Relationships in Foods which was held from April 10-14, 1989 at the 197th National Meeting of the American Chemical Society in Dallas, Texas under the auspices of the Agricultural and Food Chemistry Division of ACS. The editors of this book organized the symposium to bring together an esteemed group of internationally respected experts currently active in the field of water relationships in foods to discuss recent advances in the 1980s and future trends for the 1990s. It was the hope of all these contributors that this ACS symposium would become a memorable keystone above the foundation underlying the field of water in foods. This strong foundation has been constructed in large part from earlier technical conferences and books such as the four milestone International Symposia on the Properties of Water (ISOPOW I-IV), the recent IFT Basic Symposium on Water Activity and Penang meeting on Food Preservation by Moisture Control as well as the key fundamental contributions from the classic 1980 ACS Symposium Series 127 on Water in Polymers and from Felix Franks' famous seven volume Comprehensive Treatise on Water plus five subsequent volumes of the ongoing Water Science Reviews. The objective of the 1989 ACS symposium was to build on this foundation by emphasizing the most recent and major advances.
