Overview

As shipped from the [factory](#), a JACE-4, and -5 series controller with OS-AX contains only the bare minimum of software to run the Niagara platform daemon (niagarad). The controller does *not* contain a Java VM, Niagara runtime environment or software modules, lexicons, license, certificate, stations, and so on. A JACE-2 series controller *does* include a core Niagara software load and a Tridium certificate, but *not* all items needed. Using NiagaraAX Workbench, you must connect to the controller and install a Niagara distribution file, modules, license(s), and do other platform configuration. Some important related tasks include setting the JACE’s:

- IP network address, and related IP networking parameters
- Platform daemon credentials (for platform login)
- Time and date (or simply sync with your PC’s time)

This document provides step-by-step instructions for these and other tasks. As described ahead, the most straightforward way is to use the [Commissioning Wizard](#).

Note: Most steps in the Commissioning Wizard are also available as separate platform views. For example, there is a [Distribution File Installer](#), [Software Manager](#), [License Manager](#) and many others. For more details, see the section “Niagara platform” in the *Platform Guide*.
