Airborne Radioactive Contamination in Inhabited Areas, 2009-08-14 For many decades investigations of the behaviour and implications of radioactive contamination in the environment have focused on agricultural areas and food production This was due to the erroneous assumption that the consequences of credible contaminating incidents would be restricted to rural areas However due to the Chernobyl accident more than 250 000 persons were removed from their homes demonstrating a great need for knowledge and instruments that could be applied to minimise the manifold adverse consequences of contamination in inhabited areas Also today the world is facing a number of new threats including radiological terrorism which would be likely to take place in a city where most people would become directly affected A recent report from the US Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism concludes that it is most likely that a large radiological or even nuclear terror attack on a major city somewhere in the world will occur before 2013 For the first time ever the specific problems of airborne radioactive contamination in inhabited areas are treated in a holistically covering treatise pinpointing factorial interdependencies and describing instruments for mitigation The state of the art knowledge is here explained in *Airborne Radioactive Contamination in Inhabited Areas* y leading scientists in the various disciplines of relevance Unique holistic description of airborne radioactive contamination of inhabited areas and its consequences State of the art information on problems associated with both accidental and malicious contamination events in particularly dirty bombs Detailed description of processes and parameters governing the severity of contaminating incidents Written by key experts in the world **Stone Conservation** Clifford A. Price, Eric Doehne, 2011-02-15 First published in 1996 this volume has been substantially updated to reflect new research in the conservation of stone monuments sculpture and archaeological sites *Establishing a catchment monitoring network through a participatory approach* Victor M. Kongo, Graham P. W. Jewitt, Simon A. Lorentz, 2007-10-04 Evaporation Rain Groundwater Conservation tillage Runoff Stream flow Flumes Discharges Hydrology Surveys Monitoring Catchment areas River basins **Democratic Science Teaching: Building the Expertise to Empower Low-Income Minority Youth in Science** Sreyashi Jhumki Basu, Angela Calabrese Barton, Edna Tan, 2011-11-12 Democratic science pedagogy has the potential to shape learning outcomes and science engagement by taking on directly issues of pedagogy learning and social justice In this text we provide a framework for democratic science teaching in order to interrogate the purposes and goals of science education in classrooms globally as well as to call attention to ways of being in the classroom that position teachers and students as important and powerful participants in their own learning and as change agents of a larger global society We develop three core conceptual tools for democratic science teaching that together frame ways of thinking and being in classrooms that work towards a more just world Voice Authority and Critical Science Literacy Each conceptual tool is

developed in the introductory chapters then taken up in different pedagogical and analytic ways in the chapters that span the text. The chapters present researcher teacher and student centered lenses for investigating democratic science education and reflect elementary through high school education both in school and out of school in the US and globally. *Dyke Swarms - Time Markers of Crustal Evolution* E. Hanski, S. Mertanen, T. Rämö, Jouni Vuollo, 2006-09-28 Dyke swarms are remnants of large igneous provinces and are pointers of continental break up events as well as indicators for ancient continental reconstructions. These global geodynamic aspects are of crucial significance in tectonics and with recent developments in high precision age dating it has become possible to enter these short lived ma

Linguistics and Language Behavior Abstracts, 2005-04 *People of Today*, 2006 [Drawing for Science Education](#) Phyllis Katz, 2017-03-23 This book argues for the essential use of drawing as a tool for science teaching and learning. The authors are working in schools, universities and continual science learning CSL settings around the world. They have written of their experiences using a variety of prompts to encourage people to take pen to paper and draw their thinking, sometimes direct observation and in other instances their memories. The result is a collection of research and essays that offer theory, techniques, outcomes and models for the reader. Young children have provided evidence of the perceptions that they have accumulated from families and the media before they reach classrooms. Secondary students describe their ideas of chemistry and physics. Teacher educators use drawings to consider the progress of their undergraduates' understanding of science teaching and even their moral/ethical responses to teaching about climate change. Museum visitors have drawn their understanding of the physics of how exhibit sounds are transmitted. A physician explains how the history of drawing has been a critical tool to medical education and doctor/patient communications. Each chapter contains samples, insights and where applicable analysis techniques. The chapters in this book should be helpful to researchers and teachers alike across the teaching and learning continuum. The sections are divided by the kinds of activities for which drawing has historically been used in science education. An instance of observation: Audubon, Linnaeus. A process: how plants grow over time, what happens when chemicals combine. Conceptions of what science is and who does it. Images of identity development in science teaching and learning.

Rise Of The Global South, The: Philosophical, Geopolitical And Economic Trends Of The 21st Century Justin Dargin, 2013-05-27 This book provides a broad and in depth introduction to the geopolitical, economic and trade changes wrought with the increasing influence of the countries of the Global South in international affairs. The global role of the developing countries came to the forefront in 1974 when the United Nations General Assembly promulgated The New International Economic Order. Since then the countries of the Global South, particularly China, India, Brazil, Saudi Arabia, South Africa and Qatar, made an indelible impact upon the world's economic architecture. However, their true influence became starkly illustrated during the onset of the 2000s when several seismic events occurred: The September Eleventh terrorist attacks with the resultant debilitating wars in Iraq and Afghanistan, extreme world commodity price increases and the global financial crisis of 2007-2008 all served

to wrench the epicenter of global influence increasingly southward While the developed countries of the Global North became mired in economic stagnation with problems associated with the global financial crisis their collective influence waned Since then the world has been attempting to accommodate somewhat unevenly the rising geopolitical and economic clout of the Global South This book presents a collection of scholarly articles that taken together functions as a primer on the workings of the immense global changes at the beginning of the twenty first century Geological Survey of Canada, Current Research (Online) no. 2002-F6 , *Index of Conference Proceedings* British Library.
