New Computing Techniques In Physics Research
 Iii - Proceedings Of The 3rd International Workshop On Software Engineering, Ai And Expert Systems For High Energy And Nuclear Physics K H Becks, Denis Perret-gallix, 1994-02-04 No basic or applied physics research can be done nowadays without the support of computing systems ranging from cheap personal computers to large multi user mainframes Some research fields like high energy physics would not exist if computers had not been invented Departing from the more conventional numerical applications this series of workshops has been initiated to focus on Artificial Intelligence AI related developments such as symbolic manipulation for lengthy and involved algebraic computations software engineering to assist groups of developers in the design coding and maintenance of large packages expert systems to mimic human reasoning and strategy in the diagnosis of equipment or neural networks to implement a model of the brain to solve pattern recognition problems These techniques developed some time ago by AI researchers are confronted by down to earth problems arising in high energy and nuclear physics All this and more are covered in these proceedings **Resources in Education** , 1998

Decision Support in Public Administration P.W.G. Bots, H.G. Sol, Roland Traunmüller, 2013-10-22 The vast flow of information to be considered by policy and decision makers in national and local governments is continuing to expand during the 1990s whilst budgets for staff to process the information are being tightened This publication provides a forum for the examination of the problem It aims to focus the efforts of researchers and practitioners more effectively in applying information technology to increase the performance of decision makers in public administration despite the limited resources Topics explored include the following design considerations and approaches for and practical experiences with communication and information processing infrastructure and applications at the workplace level the design and implementation of support systems for individual or group decision making in governmental and municipal settings modelling

and model management techniques based on case reports of successful and unsuccessful modelling efforts concepts approaches and models for re designing tasks and processes in public administration issues and challenges in integrating the information systems of several governmental bodies The book is divided into two parts for the discussion of these themes the first section deals primarily with theoretical and conceptual issues the second part contains papers with a stronger emphasis on systems their functionality and experiences in their development and application The authors affiliations 17 organizations from 8 different countries indicates the international nature of the contributions The ideas put forward in their papers show that research into supporting decision making in public administration is well on its way but that the research area is vast with yet many hills to scale
