

Micca M-8S/M-6S: 8" and 6.5" 2-Way In-Wall Speakers

Thank you for purchasing the Micca M-8S/M-6S In-Wall Speaker! This product has been designed for optimal audio reproduction performance in a variety of home entertainment configurations, with accuracy, clarity, and impact that discerning audiophiles listen for.

Please take the time to become familiar with the M-8S/M-6S and the proper installation procedures as detailed in this manual.

Installation Tools

A proper installation ensures optimal performance from the M-8S/M-6S. The following installation tools will be needed:

1. Drywall saw
2. Screwdriver, Phillips head
3. Masking Tape – 1.8 to 2.0 inch
4. Pencil
5. Bubble or laser level
6. Tape measure
7. Stud Finder

Mounting Location

When choosing where to mount for the M-8S/M-6S speakers, be sure that there are no electrical wires, ducts, plumbing, gas pipes, or any other services running through the location. The M-8S/M-6S can be mounted in any orientation in order to provide proper coverage at the listener's position. While it is most often mounted in wall, it can also be mounted in ceiling. Keep the following in mind while deciding where to mount the M-8S/M-6S:

Separation – Distance between a pair of M-8S/M-6S should be shorter than the distance from the speakers to the listener.

Height – Front speaker position should have the center of the M-8S/M-6S at ear level of the

listener when seated. Center speaker position can be above or below the TV/Display, whichever is closer to seated ear level. Surround locations should be just above seated ear level. If the surround location is very close to the listener, the mounting height can be up to 3 feet above seated ear level to compensate.

Tweeter Aiming – The tweeter should be aimed towards the listener for all mounting locations.

Mounting Preparation

The M-8S/M-6S requires a cutout size as listed in the specifications section. An additional $\frac{3}{4}$ " is required in all directions behind the wall for attachment. Modern home construction typically utilize wall studs spaced on 16" centers, providing approximately 14 $\frac{3}{4}$ " between studs.

Use a stud finder to locate studs in the wall, including horizontal braces that may interfere with the mounting height.

Use the supplied template and a pencil to mark the position where the cutout will be made. Use a bubble or laser level to help ensure that the template is straight. Cut a small square hole in the marked location to double-check that there are no obstructions behind the wall.

Using a drywall saw, make the mounting cutout according to the template outline. Be sure to cut through the drywall at a 90 degree angle. Trim any jagged or loose pieces of drywall. Cover the cut edges of the drywall with strips of masking tape, folding over the edges on both the front and back sides of the drywall (See Figure 1). This will prevent the gypsum in the drywall from being knocked loose from speaker vibration. Do not allow the edge of the masking tape to protrude more than $\frac{1}{4}$ " beyond the cutout on the
