Abstract: The purpose of this study was to determine the effect of a 12-week training program on the physical and psychological health of elderly people. The study was conducted in a community center in a city in the north of Iran. The study population consisted of 30 elderly people (15 men and 15 women) aged 65 and over. The study was a randomized controlled trial. The control group received no intervention, while the experimental group received a 12-week training program. The training program consisted of aerobic, strength, and flexibility exercises. The physical and psychological health of the participants was assessed at the beginning and end of the study. The results showed that the training program had a significant positive effect on the physical and psychological health of the elderly people. The study suggests that a 12-week training program can improve the physical and psychological health of elderly people.
