Chapter 6

Firms and Production

- 1.1 Owners of firms without limited liability benefit from 100% of the company's gains, but also suffer 100% of the company's losses, including possibly losing their personal assets. Owners of firms with limited liability benefit from company gains, but company losses do not affect them beyond the investment they made in the company stock. Thus, owners of limited liability companies are more willing to take risks, like investing in large capital projects. Hence, limited liability companies are more likely to grow.
- 1.2 Economists usually assume that a firm's owners try to maximize profit. A firm's profit is the difference between its revenue, which is what it earns from selling the good, and its cost, which is what it pays for labor, materials, and other inputs. In reality, some owners have other objectives, such as having as big a firm as possible or a fancy office or keeping risks low.
- 1.3 Corporations have limited liability: The personal assets of the corporate owners cannot be taken to pay a corporation's debt if it goes into bankruptcy. Because of the limited liability of corporations, the most that shareholders can lose if the firm goes bankrupt is the amount they paid for their stock, which becomes worthless if the corporation fails.
- 2.1 The more time a firm has to adjust its inputs, the more factors of production it can alter. The short run is a period of time so brief that at least one factor of production cannot be varied.
