

Barriers to Trade

The harmonization of national export and import regulations, free trade is a system wherein all the goods of governments have the same international trade possibilities for the benefit of their own economies. Once the free trade system has been achieved, many trade barriers, such as tariff regulations, are being torn apart. Examples of these barriers include the General Agreement on Trade and Tariffs, the World Trade Organization (WTO), the Organisation for Economic Co-operation and Development (OECD), and the North Atlantic Trade Agreement (NAFTA) forum.

However, barriers to international trade systems, although various, have never been that common. Exporting is generally a costly activity for nations, but Figure 10.1 also presents some evidence that demonstrates the importance of removing the unnecessary and unproductive barriers to international trade. The demand supply curve indicates that the domestic supply are willing and able to produce at other prices, prices of these nations are determined by the international supply and demand price schedule. Furthermore, domestic supplies, Q_1 , would be produced only by domestic firms.

Figure 10.1
International Trade

It shows in this international trade the total supply harmonization the production of domestic goods and services at a domestic price, P_1 , and quantity Q_1 . They are able to increase their welfare, produce at a lower price, P_2 , and increase their production, Q_2 , and foreign producers are producing $Q_2 - Q_1$. Thus, domestic firms are producing less and foreign suppliers would produce what they might be exporting.
