Spontaneous Pathology of the Laboratory Non-human Primate Alys Bradley, Jennifer Chilton, Beth Mahler, 2023-06-20 Spontaneous Pathology of the Laboratory Non-human Primate serves as a go-to resource for all pathologists working on primates in safety assessment studies. In addition, it helps diagnostic veterinary pathologists rule out spontaneous non-clinical disease pathologies when assigning cause of death to species in zoological collections. Primate species included are rhesus, cynomolgus, macaques, and marmosets. Multi-authored chapters are arranged by organ system, thus providing the necessary information for continued research. Pathologists often face a lack of suitable reference materials or historical data to determine if pathologic changes they are observing in monkeys are spontaneous or a consequence of other treatments or factors. Contains color illustrations that depict the most common lesions to augment descriptions. Covers descriptions that are compliant with the International Harmonization of Nomenclature and Diagnostic Criteria (IHAND) guidelines set forth by the Society of Toxicologic Pathology (STP). Provides pathologists with common terms that are compliant with the FDA's Standard for Exchange of Nonclinical Data (SEND) guidelines.
