Josh throws a ball into the air with an initial upward velocity of 48 feet/second. Its heights (h) in feet after t seconds is given by the function $h = -16t^2 + 48t + 4$

Height $\nearrow$ $\nwarrow$ Time $\nwarrow$ velocity $\nwarrow$
y-int / Initial height

Vertex:
(1.5, 40)

Zeros:
 $x = \cancel{-0.08}$
 $x = 3.08$

y-int:
(0, 4)

Can't have negative time.

1. In how many seconds will the ball reach its maximum height? 1.5 seconds (x-value of vertex)
2. What is the ball's maximum height? 40 feet (y-value of vertex)
3. How long for the ball to hit the ground? 3.08 seconds (height = 0)
4. What will the height, in feet, of the ball be after 2 seconds? 36 feet ($t = 2$)

Building Intelligent Interactive Tutors Beverly Park Woolf, 2010-07-28 Building Intelligent Interactive Tutors discusses educational systems that assess a student's knowledge and are adaptive to a student's learning needs. The impact of computers has not been generally felt in education due to lack of hardware, teacher training, and sophisticated software, and because current instructional software is neither truly responsive to student needs nor flexible enough to emulate teaching. Dr. Woolf taps into 20 years of research on intelligent tutors to bring designers and developers a broad range of issues and methods that produce the best intelligent learning environments possible, whether for classroom or life-long learning. The book describes multidisciplinary approaches to using computers for teaching, reports on research, development, and real-world experiences, and discusses intelligent tutors, web-based learning systems, adaptive learning systems, intelligent agents, and intelligent multimedia. It is recommended for professionals, graduate students, and others in computer science and educational technology who are developing online tutoring systems to support e-learning and who want to build intelligence into the system. Combines both theory and practice to offer most in-depth and up-to-date treatment of intelligent tutoring systems available. Presents powerful drivers of virtual teaching systems, including cognitive science, artificial intelligence, and the Internet. Features algorithmic material that enables programmers and researchers to design building components and intelligent systems.

Using Reflection and Metacognition to Improve Student Learning Naomi Silver, Matthew Kaplan, Danielle LaVaque-Manty, Deborah Meizlish, 2023-07-03 Research has identified the importance of helping students develop the ability to monitor their own comprehension and to make their thinking processes explicit, and indeed demonstrates that metacognitive teaching strategies greatly improve student engagement with course material. This book, by presenting principles that teachers in higher education can put into practice in their own classrooms, explains how to lay the ground for this engagement and help students become self-regulated learners actively employing metacognitive and reflective strategies in their education. Key elements include embedding metacognitive instruction in the content matter, being explicit about the usefulness of metacognitive activities to provide the incentive for students to commit to the extra effort, as well as following through consistently. Recognizing that few teachers have a deep understanding of metacognition and how it functions, and still fewer have developed methods for integrating it into their curriculum, this book offers a hands-on, user-friendly guide for implementing metacognitive and reflective pedagogy in a range of disciplines. Offering seven practitioner examples from the sciences, technology, engineering, and mathematics, STEM fields, the social sciences, and the humanities, along with sample syllabi, course materials, and student examples, this volume offers a range of strategies for incorporating these pedagogical approaches in college classrooms, as well as theoretical rationales for the strategies presented. By providing successful models from courses in a broad spectrum of disciplines, the editors and contributors reassure readers that they need not reinvent the wheel or fear the unknown, but can instead adapt tested interventions that
