Text A – Plastic and Our Oceans

Sir David Attenborough: plastic and our oceans

Future of Plastic Broadcaster, conservationist and vice-president at Fauna & Flora International – Sir David speaks to us about ocean conservation and the global plastic challenge.

1 What do the oceans mean to you?

"I am sure I am not alone in having a great many fond memories associated with the sea, and the more I have come to learn about our blue planet, the more I have come to appreciate the oceans not only for their beauty, but as an absolutely vital resource that is critical for our very survival."

5 "I think, because the oceans are so vast and because they are so mysterious, there is a sense that somehow they are untouchable, and that what we do on land has no effect on them in any meaningful way. Not true, sadly."

Blue Planet II helped to put plastic pollution on the global agenda. How do you feel about that?

"Well, naturally I'm pleased! Not everybody has had the chance to visit these remote and astonishing places, and so I do think that our job as filmmakers is to inspire people with the wonders of the natural world, but also to help them understand the threat that our planet is facing."

"Why this topic has particularly captured the public imagination is hard to say, but it is clear that it has helped to build momentum for us to take action."

How serious do you think this issue is?

15 "It could hardly be more serious."

"I suppose, for me, the thing that is so worrying about plastic pollution in particular is that it is so utterly unnecessary. The plastic in our oceans could not have got there in the first place – much of it perhaps ought not to have even been manufactured. And yet it is there, in unbelievable quantities, causing untold harm to marine life."

20 "And, of course, once it is in the sea, it never really breaks down properly – it remains there for decades or even centuries. Unless we get to grips with this quickly, we will soon find our oceans completely dominated by plastic. It is a prospect that hardly bears thinking about."

Do you think we are going in the right direction?

"There is no doubt that governments are having a profound impact on the marine environment. From 25 pollution levels are falling, and we are gradually eroding away at the health of our oceans."

"How we address the threats is a difficult but important question. I'm afraid I don't know the answer, but I do take heart in the fact that there are a lot of people out there working on ways that we can deal with plastic waste. It won't be easy, by any means, but as long as we keep building on the momentum we have gained then I am hopeful we can make progress."

Frontiers in the Acquisition of Literacy Claire M. Fletcher-Flinn, 2015-09-28 Learning to read and to spell are two of the most important cultural skills that must be acquired by children and for that matter anyone learning a second language. We are not born with an innate ability to read. A reading system of mental representations that enables us to read must be formed in the brain. Learning to read in alphabetic orthographies is the acquisition of such a system which links mental representations of visual symbols (letters in print words) with pre-existing phonological sound and semantic comprehension cognitive systems for language. Although spelling draws on the same representational knowledge base and is usually correlated with reading, the acquisition processes involved are not quite the same. Spelling requires the sequential production of letters in words and at beginning levels there may not be a full degree of integration of phonology with its representation by the orthography. Reading on the other hand requires only the recognition of a word for pronunciation. Hence spelling is more difficult than reading and learning to spell may necessitate more complete representations or more conscious access to them. The learning processes that children use to acquire such cognitive systems in the brain and whether these same processes are universal across different languages and orthographies are central theoretical questions. Most children learn to read and spell their language at the same time, thus the co-ordination of these two facets of literacy acquisition needs explication as well as the effect of different teaching approaches on acquisition. Lack of progress in either reading and/or spelling is also a major issue of concern for parents and teachers, necessitating a cross-disciplinary approach to the problem encompassing major efforts from researchers in neuroscience, cognitive science, experimental psychology and education. The purpose of this Research Topic is to summarize and review what has been accomplished so far and to further explore these general issues. Contributions from different perspectives are welcomed and could include theoretical, computational and empirical works that focus on the acquisition of literacy, including cross-orthographic research.
