Introduction Every book has a history this one not excepted having emerged from intersections in professional lives of the Editors This book bears the fruits of a collaboration between the pupil RDC and the mentor PL During an extended sabbatical of the pupil in Boston in 1994 we probed together the concept that endothelial dysfunction served as a common denominator of vascular disease with the balance between inflammation and its inhibition as a fulcrum of the regulation of the behavior of endothelial cells As practicing cardiologists in our clinical lives we sought to link to endothelial function the mechanisms of action of risk factors and of pharmacologic

agents used to treat and prevent vascular disease The pupil therefore authored a few reviews on the mechanism of action of risk factors and included them in a small book published in Italian for which the mentor wrote a preface The book was greeted with favor from the Italian cardiological community and provided the nidus for the present more ambitious endeavor which includes updated reviews on the pathogenesis of vascular disease and on the most novel aspects of vascular biology This enterprise was enabled by the contributions of many of our former or present collaborators and colleagues without whose enthusiasm and engagement this work could never have seen light We largely underestimated the devotion necessary on our own side at the beginning but it ultimately yielded a product that we feel achieves our original goals We are aware that we confront a continuously evolving topic where frequent updates would be desirable if not necessary Yet we believe in the value of books such as the current one that attempt to organize in a snapshot of time the vast amount of literature available in a coherent and comprehensive scheme We are aware of existing gaps of emerging material not paid its due and of the rapid evolution of some of the concepts highlighted within The links between the laboratory and the clinic have never afforded more opportunity for new understanding and advances in diagnosis and treatment than today We hope that our colleagues vascular biologists cardiologists internists and other physicians alike will find this compendium a useful guide to this most exciting time in vascular biology and medicine Raffaele De Caterina and Peter Libby
