

Nursing Research and Evidence-Based Practice

14 pages | 3474 words

I did not understand why I had to take a research class when all I wanted to do was be a staff nurse in a critical care unit. Research? Evidence-based practice? Why are these topics in the nursing program? I have enough to do just learning all the content in my clinical courses. What do research and evidence have to do with developing my nursing abilities? I trust the faculty, the textbooks, and clinical experience to prepare me for nursing. I'm already getting what I need to know. That was my earlier attitude. Now that I am practicing, I have a new appreciation for nursing research and the evidence it provides for application to practice.

I have an entirely different way of addressing clinical questions. I'm starting to ask questions about how I can improve the care I give to patients and how I can be involved in my workplace's efforts to improve care for the patients it serves. I have discovered by purposeful reading in my practice area that research reports and research summaries contain many implications that apply to practice in the critical care unit. ;
QUESTIONS TO CONSIDER WHILE READING THIS CHAPTER: 1 How can faculty encourage students to read research journals?

2 How does research affect nursing practice? 3 How can nurses motivate colleagues to base their practice on research? KEY TERMS Clinical nurse researcher (CNR) An advanced practice nurse who is doctorally prepared and directs and participates in clinical research. Clinical nurse specialist (CNS) An advanced practice nurse who provides direct care to clients and participates in health education and research. Clinical practice guideline (CPG) an evidence-based guide to clinical practice developed by experts in a particular ? eld for direct application in clinical environments.

Control group Subjects in an experiment who do not receive the experimental treatment and whose performance provides a baseline against which the effects of the treatment can be measured. When a true experimental design is not used, this group is usually called a comparison group. Data collection The process of acquiring existing information or developing new information. 104 Nursing Research and Evidence-Based Practice CHAPTER 6 105 Empirical Having a foundation based on data gathered through the senses (e. g. , observation or experience) rather than purely through theorizing or logic.

Ethnography A qualitative research method for the purpose of investigating cultures that involves data collection, description, and analysis of data to develop a theory of cultural behavior. Evidence-based practice The process of systematically ? nding, appraising, and using research ? ndings as the basis for clinical practice. Experimental design A design that includes randomization, a control group, and manipulation between or among variables to examine probability and causality among selected variables for the purpose of predicting and controlling phenomena. Generalizability The inference that ?

ndings can be generalized from the sample to the entire population. Grant Proposal developed to seek research funding from private or public agencies. Grounded theory A qualitative research design used to collect and analyze data with the aim of developing theories grounded in real-world...
