The approaches in science of research will benefit all aspects of science, engineering, technology, system and management.

1 Introduction

Science of research (research science) is not new, because science and technology have been developed dramatically in the past few hundred years. Scientific inquiry underpins the science of research during that time. Research methodologies have become a discipline in order to train higher degree students in the past few decades. Many universities have offered Research methodology as a course or subject for undergraduate or postgraduate students.

Science of research has been drawn some attention in some research fields including Sport and Tourism (Harris, 2006), education (Carlson & Marshall, 2009), social psychology (Kassin, Fein, & Markus, 2011), families (Olson, 2011) and molecular and cellular cognition (MCC) (Silva & Bickle, 2009). For example, Silva (2007) proposes the principles underlying the discovery of cognitive and other biological mechanisms as a part of the science of research. He proposes a new general framework for science of research and applies it to the search for molecular mechanisms of cognitive functions (Silva & Bickle, 2009). However, research has not been considered as a science, that is, science of research has been not considered as a member of science realm, because en.wikipedia.org has no items of either "Science of research" or "research science"(retrieved on 18 July 2017).

Science of research can be defined as a set of principles and methods for scientific investigation into technology of research, engineering of research and management of research to improve research and research decision making. It mainly addresses the following questions. What is research? How can do research? How can manage research? How can automate a research? How can engineer a research? And etc. The approaches in science of research will benefit all aspects of science, engineering, technology, system and management.

It should be noted that the author motivated science of research based on his predilection on research methodology for three decades. Just as that F Taylor developed science of management (scientific management) from 1908 to 1911 and it later underpins science of business. Science of research should become a member of science realm. What F Taylor dreamed in 1908 is similar to what the author has dreamed about science of research.

The author believes that this is a topic for a series of books or research papers, if we can build a school of business based on science of management, or science of business, why cannot we build a school of

Writing Scientific Research Articles Margaret Cargill, Patrick O'Connor, 2011-09-13 Margaret Cargill's background as a linguist and research communications educator and Patrick O'Connor's experience as both research scientist and educator synergize to improve both the science and art of scientific writing. The book is clearly written, has a logical step-by-step structure, is easy to read, and contains a lot of sensible advice about how to get scientific work published in international journals. The book is a most useful addition to the literature covering scientific writing. *Aquaculture International* April 2009. **Writing Scientific Research Articles: Strategy and Steps** guides authors in how to write as well as what to write to improve their chances of having their articles accepted for publication in international peer-reviewed journals. The book is designed for scientists who use English as a first or an additional language for research students and those who teach them paper writing skills and for early career researchers wanting to hone their skills as authors and mentors. It provides clear processes for selecting target journals and writing each section of a manuscript, starting with the results. The stepwise learning process uses practical exercises to develop writing and data presentation skills through analysis of well-written example papers. Strategies are presented for responding to referee comments as well as ideas for developing discipline-specific English language skills for manuscript writing. Standard English scientific writing style is also compared with science papers written in other languages. The book discusses the strengths and challenges faced by people with different degrees of science writing expertise and the role of journal editors and reviewers.

How To Read And Critique A Scientific Research Article: Notes To Guide Students Reading Primary Literature (With Teaching Tips For Faculty Members) Foong May Yeong, 2014-01-16 Given the explosion of information and knowledge in the field of Life Sciences adapting primary literature as materials in course work as part of active learning seems to be more effective in improving scientific literacy among science undergraduates than the pure transmission of content knowledge using traditional textbooks In addition students also read research articles as part of undertaking laboratory research projects useful for preparing them for graduate school As such a good grasp of reading and analytical skills is needed for students to understand how their research project contributes to the field that they are working in Such skills are being taught at UK and USA universities In Asia this approach in teaching has not yet been as widespread although similar ideas are beginning

to be used in education Written as a quick guide for undergraduate students and faculty members dealing with scientific research articles as part of a module or research project this book will be useful especially in Asia for students and faculty members as the universities look to incorporating the use of scientific research articles in their undergraduate teaching For Life Science students the first time they encounter a primary literature can be rather daunting though with proper guidance they can overcome the initial difficulties and become confident in dealing with scientific articles This guidebook provides a structured approach to reading a research article guiding the reader step by step through each section with tips on how to look out for key points and how to evaluate each section Overall by helping undergraduate students to overcome their anxieties in reading scientific literature the book will enable the students to appreciate better the process of scientific investigations and how knowledge is derived in science *ChatGPT in Scientific Research and Writing* Jie Han, Wei Qiu, Eric Lichtfouse, 2024-09-13 Most scientists are constantly under pressure for reading essential literature designing new experiments writing successful proposals and papers and meeting deadlines However imagine that your brain is connected to the entire human knowledge and can extract instantly essential information for discovery Imagine that research tasks that took days to months can now be done within few seconds This is not science fiction anymore since the onset of generative artificial intelligence tools such as ChatGPT This book explains concisely and simply how to use ChatGPT for identifying new results crafting titles editing language interpreting figures creating visuals and refining methods ChatGPT even allows for brainstorming designing experiments writing proposals responding to reviewers and evaluating research papers Written for researchers with no background in coding or prompt engineering this book provides the skills necessary to navigate the changing landscape of scientific research In particular you will learn how to leverage ChatGPT's unique capabilities to generate ideas streamline literature reviews and craft compelling narratives In short this book empowers you to unlock the potential of ChatGPT boosting productivity and take your scientific research and writing to new heights *From Research to Manuscript* Michael Jay Katz, 2009-01-21 Observations Plus Recipes It has been said that science is the orderly collection of facts about the natural world Scientists however are wary of using the word fact Fact has the feeling of absoluteness and universality whereas scientific observations are neither absolute nor universal For example children have 20 deciduous baby teeth is an observation about the real world but scientists would not call it a fact Some children have fewer deciduous teeth and some have more Even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood When they are babies and toddlers children have less than 20 visible teeth and as they grow older children begin to lose their deciduous teeth which are then replaced by permanent teeth Children have 20 deciduous baby teeth is not even a complete scientific statement For one thing the statement children have 20 deciduous teeth does not tell us what we mean by teeth When we say teeth do we mean only those that can be seen by the unaided eye or do we also include the hidden unerupted teeth An observation such as children have 20 deciduous teeth is not a fact and by itself it is not acceptable as a

scientific statement until its terms are explained scientifically children have 20 deciduous teeth must be accompanied by definitions and qualifiers *Scientific Research in Information Systems* Jan Recker,2012-07-30 This book is designed to introduce doctoral and other higher degree research students to the process of scientific research in the fields of Information Systems as well as fields of Information Technology Business Process Management and other related disciplines within the social sciences It guides research students in their process of learning the life of a researcher In doing so it provides an understanding of the essential elements concepts and challenges of the journey into research studies It also provides a gateway for the student to inquire deeper about each element covered Comprehensive and broad but also succinct and compact the book is focusing on the key principles and challenges for a novice doctoral student *Specialized Communication* Thorsten Roelcke,Ruth Breeze,Jan Engberg,2025-06-02 Specialized communication in science technology or institutions is one of the most important and exciting fields of applied linguistics The handbook captures the current and relevant knowledge of specialized languages and professional communication It promotes international communication on central issues where dialogue is urgently needed concerning both their intellectual underpinning and the day to day practices associated with them *Research* ,1889 Scientific Change Alistair Cameron Crombie,1963 **The Engineering Index** ,1920 Resources in education ,1983-08 Education Act 1918 London County Council,1920
