Lesson #7: Exploring Exponential Growth and Decay**Fighting Fleas**

After a dog or cat is given a preventive flea medicine, the medicine begins to break down in the animal's bloodstream. With each passing hour, there is less active medicine in the blood. The table and the graph show the amount of active medicine in a dog's bloodstream each hour for 6 hours after a 20-milligram dose.

Time since dose (hours)	Active medicine in blood (milligrams)
0	20
1	10
2	5
3	2.5
4	1.25
5	0.625
6	0.3125

Study the pattern of change in the graph and the table.

- A.** How does the amount of active medicine in the dog's blood change from one hour to the next?

- B.** Write an equation to model the relationship between the number of hours since the dose was administered, h , and the milligrams of active medicine, m .

- C.** Based on your knowledge of exponential relationships, what pattern would you expect to see in the data if 40 milligrams of the medicine were given to the dog?

Mathematics in Population Biology Horst R. Thieme,2003 The formulation analysis and re evaluation of mathematical models in population biology has become a valuable source of insight to mathematicians and biologists alike This book presents an overview and selected sample of these results and ideas organized by biological theme rather than mathematical concept with an emphasis on helping the reader develop appropriate modeling skills through use of well chosen and varied examples Part I starts with unstructured single species population models particularly in the framework of continuous time models then adding the most rudimentary stage structure with variable stage duration The theme of stage structure in an age dependent context is developed in Part II covering demographic concepts such as life expectation and variance of life length and their dynamic consequences In Part III the author considers the dynamic interplay of host and parasite populations i e the epidemics and endemics of infectious diseases The theme of stage structure continues here in the analysis of different stages of infection and of age structure that is instrumental in optimizing vaccination strategies Each section concludes with exercises some with solutions and suggestions for further study The level of mathematics is relatively modest a toolbox provides a summary of required results
