DESCRIPTION

The rear wheels of the tractor are equipped with two-shoe internal expanding brakes operating in 14 in. drums. The brake linings are bonded to the shoes in production, but the shoes are drilled to enable replacement linings to be riveted to the shoes should they be required in service.

The brakes are operated independently by two pedals on the right-hand side of the tractor through a suitable linkage. The left-hand brake pedal is, however, fitted with a locking pin which can be engaged with the right-hand pedal so that the brakes will operate together. This pedal lock should always be engaged when the tractor is used on fast road work.

Jan. 1958

For parking purposes the brakes may be locked "on" by a pawl on the right-hand brake camshaft which can be engaged, by means of a latch, with a fixed sector on the transmission housing (Fig. 2). To lock both brakes "on" for parking the pedal lock should first be engaged and the pedals depressed while the latch is moved rearwards to engage the pawl in the sector.

BRAKE ADJUSTMENT

Wear will take place on the brake linings due to normal usage and it will be indicated by a gradual increase in pedal travel before effective braking is obtained. This will be noticeable also during the initial bedding-in of the shoes. If operating
