In particular, it considers algorithm RSA secret sharing algorithms, Diffie-Hellman Scheme, and ElGamal cryptosystem based on discrete logarithm problem. It also presents Buchberger's algorithm, which is one of the important algorithms for constructing Gröbner basis. Key Features: Covers all major topics of classical theory of modern abstract algebra such as groups, rings, and fields and their applications. In addition, it provides the introduction to the number theory, theory of finite fields, finite dimensional algebras, and their applications. Provides interesting and important modern applications in such subjects as Cryptography, Coding Theory, Computer Science, and Physics. Presents numerous examples illustrating the theory and applications. It is also filled with a number of exercises of various difficulty. Describes in detail the construction of the Cayley-Dickson construction for finite dimensional algebras in particular algebras of quaternions and octonions and gives their applications in the number theory and computer graphics. *A Grammar of Möðruvallabók* Andrea de Leeuw van Weenen, 2018-04-10 This book describes the palaeography, orthography, and morphology of the 14th century saga manuscript Möðruvallabók. First published in 2000, it is the third and final volume of a set of which the first 2 volumes were published in 1987. The descriptions are complete and frequencies are given in absolute numbers. Where variation is found between sagas, each saga is treated separately. Möðruvallabók is a large manuscript in size 200 leaves of 34x24cm and in scope containing 11 sagas among them Njála, Eiríks saga, and Laxdæla. The normalized spelling found in 19th century grammars and dictionaries is based on the orthography found in this and contemporary manuscripts. Bharucha-Reid, 2012-04-26 This graduate level text and reference in probability with numerous applications to several fields of science presents nonmeasure theoretic introduction to theory of Markov processes. The work also covers mathematical models based on the theory employed in various applied fields. Prerequisites are a knowledge of elementary probability theory, mathematical statistics, and analysis. Appendixes, Bibliographies. 1960 edition. Essentials of Error-Control Coding Jorge Castiñeira Moreira, Patrick Guy Farrell, 2006-08-04 Rapid advances in electronic and optical

technology have enabled the implementation of powerful error control codes which are now used in almost the entire range of information systems with close to optimal performance. These codes and decoding methods are required for the detection and correction of the errors and erasures which inevitably occur in digital information during transmission, storage and processing because of noise interference and other imperfections. Error control coding is a complex, novel and unfamiliar area not yet widely understood and appreciated. This book sets out to provide a clear description of the essentials of the subject with comprehensive and up to date coverage of the most useful codes and their decoding algorithms. A practical engineering and information technology emphasis as well as relevant background material and fundamental theoretical aspects provides an in depth guide to the essentials of Error Control Coding. Provides extensive and detailed coverage of Block, Cyclic, BCH, Reed Solomon, Convolutional, Turbo and Low Density Parity Check LDPC codes together with relevant aspects of Information Theory. EXIT chart performance analysis for iteratively decoded error control techniques. Heavily illustrated with tables, diagrams, graphs, worked examples and exercises. Invaluable companion website features slides of figures, algorithm software updates and solutions to problems. Offering a complete overview of Error Control Coding, this book is an indispensable resource for students, engineers and researchers in the areas of telecommunications, engineering, communication networks, electronic engineering, computer science, information systems and technology, digital signal processing and applied mathematics.
