

Fourth Grade Pacing Guide Weeks 1-9

Week	Unit and Topic	Item Completed
Operations and Algebraic Thinking Use the four operations with whole numbers to solve problems.		
1	Interpret a multiplication equation as comparison, e.g., interpret $35 = 5 \times 7$ as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent whole numbers of multiplication comparisons as multiplication equations.	
2	Apply and assess a problem-solving strategy involving addition, subtraction, e.g., for any two equations with a symbol for the unknown number to represent the problem, strategizing multiplication comparison from addition comparison.	
3-4	Know numbers and number lines equal with whole numbers and finding whole number answers using the four operations, including problems in which one or more number is negative. Represent these problems using equations with a circle standing for the unknown quantity. Monitor the sense of addition of a positive using mental computation and estimation strategies, including rounding.	
Number and Operations in Base Ten Understand place value understanding for multi-digit numbers.		
5-6	Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. For example, recognize that 700 in 700 is ten times the value of 70 in 700.	
Number and Operations: Fractions Extend understanding of fraction equivalence and ordering.		
7	Explain why a fraction with a numerator less than its denominator is less than 1. Compare two fractions with the same denominator, with attention to how the numerator and size of the parts affect how much of the whole the fraction represents and for same size, the fraction with the larger numerator represents more.
