Georgia Blue Stormwater:

Stormwater Runoff and Receiving Systems Edwin Herricks, 1995-07-25 The primary focus of stormwater and urban runoff research during the past twenty five years has been on the physical description and the chemical quality assessment of runoff events and the design and implementation of the best management practices to control these events There is a definite need for more effective integration of receiving system issues in the management and regulation of stormwater runoff This book successfully brings together a diverse group of environmental specialists to address the issues surrounding the assessment management and control of stormwater and more specifically urban runoff from a receiving system perspective The book s emphasis on the receiving system is timely coming during a period when the U S Environmental Protection Agency is placing increasing emphasis on wet weather conditions through a new permit program for stormwater runoff and a policy on combined sewer overflows Stormwater Runoff and Receiving Systems covers biocriteria assessment of receiving water integrity and integrated watershed analysis all aspects of current water quality management programs for both industrial and municipal areas More than thirty chapters are divided into six sections offering in depth discussions on various issues relating to stormwater urban runoff and receiving systems impacts uncertainty and risk study design impact mitigation and issues analysis Anyone who deals with regulatory programs requiring stormwater effect assessment including more than sampling and analysis of chemical water quality parameters in effluents will find this reference particularly useful

Developing the Blue Economy Robert C. Brears, 2021-10-20 Traditionally the ocean economy is viewed solely as a mechanism for economic growth In this business as usual approach large scale industrial economies have developed the ocean economy through the exploitation of maritime and marine resources often without consideration of how those activities impact the future health or productivity of those same resources This has led to aquatic ecosystems being viewed and treated as limitless resources the marine environment becoming a dumping ground for waste overfishing diminishing fishing stocks ocean habitats being degraded from coastal developments sea level rise impacting coastal communities and infrastructure increasing ocean acidification and the marginalisation of poor coastal communities Recognising the failings of the traditional ocean economy there is a transition underway around the world towards the Blue Economy This concept moves beyond the business as usual approach with economic development and ocean health complementary to one another In the Blue Economy the environmental risks of and ecological degradation from economic activity are mitigated or significantly reduced Therefore economic activity is in balance with the long term capacity of the ocean ecosystems to support this activity and remain healthy and resilient This book will provide an overview of the various technologies used to promote cross sectoral and multi scalar collaboration facilitate the integrated management of sectors and resources foster partnerships between governments and industry encourage R D in new technologies in resource use and management and scale up innovative financing mechanisms in the development of a Blue Economy Also the book will contain in depth case studies that illustrate

how locations of differing climates lifestyles and income levels have implemented technologies to facilitate the development of the Blue Economy Developing the Blue Economy will provide an accessible resource for practitioners and researchers working in the field on the various innovative technologies being implemented around the world to create a Blue Economy

Allen Burton Jr.,John Cairns Jr.,2002-11-13 Completely revised and updated with 18 new chapters this second edition includes contributions from over 75 international experts Also a Technical Review Board reviewed all manuscripts for accuracy and currency Focusing on toxic substance and how they affect the ecosystems worldwide the book presents methods for quantifying and measuring ecotoxicological effects in the field and in the lab as well as methods for estimating predicting and modeling in ecotoxicology studies This is the definitive reference for students researchers consultants and other professionals in the environmental sciences toxicology chemistry biology and ecology in academia industry and government *Fort Benning, Maneuver Center of Excellence* ,2009

Nonpoint Source News-notes ,2004 Water Resources Management Robert C. Brears,2021-03-08 Water resource management consists of planning developing distributing and managing the available water resources With increasing urbanization optimized water management becomes more demanding This book presents innovative solutions for present as well as future challenges we are facing in water conservation recycling and reuse Elba III Project ,2007 *Innovative Urban Wet-Weather Flow Management Systems* Richard Field,James P. Heaney,Robert Pitt,2000-06-27 The 20th century s automobile inspired land use changes brought about tremendous transformations in how stormwater moves across the modern urban land scape Streets and parking areas in the average urban family s neighborhood now exceed the amount of

land devoted to living space Add parking office and commercial space and it s easy to understand how modern cities have experienced a three fold increase in impervious areas Traditional wet weather collection systems removed stormwater from urban areas as quickly as possible often transferring problems downstream Innovative Urban WetWeather Flow Management Systems does two things It considers the physical chemical and biological characteristics of urban runoff then describes innovative methods for improving wet weather flow WWF management systems The result of extensive research Innovative Urban Wet Weather Flow Manage ment Systems looks most at how to handle runoff in developments of the 21st century the confl icting objectives of providing drainage while decreasing stormwater pollutant discharges the impact of urban WWF on surface and groundwater such as smaller urban stream channels scoured by high peak flows sediment transport and the toxic effects of WWF on aquatic organisms the effectiveness of WWF controls including design guidelines and source and downstream controls are an important issue Innovative Urban Wet Weather Flow Management Systems looks at how source controls like biofi ltration created through simple grading may work in newly developing areas while critical source areas like an auto service facilities may need more extensive treatment strategies Focusing WWF treatment on intensively used areas such as the 20 percent of streets that handle the bulk of the traffic and under utilized parking areas is also considered Developing a more integrated water supply system collecting treating and disposing of wastewater and handling urban WWF requires innovative methods such as a neighborhood scale system that would recycle treated wastewater and storm water for lawn watering and toilet flushing or use treated roof runoff for potable purposes
