

3. Marking points

3.1 Marking of lists

This applies to questions requiring a set number of responses, but for which students have provided extra responses. The general principle to be followed in such a situation is that 'right + wrong = wrong'.

Each error / contradiction negates each correct response. So, if the number of error / contradictions equals or exceeds the number of marks available for the question, no marks can be awarded.

However, responses considered to be neutral (indicated as * in example 1) are not penalised.

Example 1: What is the pH of an acidic solution?

[1 mark]

Student	Response	Marks awarded
1	green, 5	0
2	red*, 5	1
3	red*, 8	0

Example 2: Name two planets in the solar system.

[2 marks]

Student	Response	Marks awarded
1	Mercury, Venus, Earth, Mars, Jupiter, Saturn, Uranus, Neptune	0

3.2 Marking of short-answer questions / short-answer

For a question asking for short-answer questions, students are given a set number of marks available. Each correct response is given the full mark available. If a student gives more than the number of marks available, each correct response is given the full mark available.

3.3 Marking of questions for calculation

Students should be awarded the full mark for a question if they have completed it correctly. If a student has completed a question but has made a mistake, the mark for the question should be given. If a student has made a mistake, the mark for the question should be given. If a student has made a mistake, the mark for the question should be given.

3.4 Interpretation of 0

Students using the word 'no' should be given credit only if it is clear that they do not know the answer to the question.
