Developing .NET Enterprise Applications John Kanalakis,2008-01-01 APPLICATION DEVELOPMENT IS USUALLY faced with several critical factors time to market ever increasing quality and cost of development Time to market is critical in that any project that an individual or company may have in mind is probably already in the works elsewhere When that is the case everything comes down to being the first to deliver even if it falls short A Gartner Research study showed that competing products offering similar features will take the most market share if released sooner The study further added that the product released first even with fewer features typically builds market share faster The lesson of that study is that it is important to release a 1.0 version of a new product concept as quickly as possible and then follow up with feature add ons over time Product consistency and quality are also critical to the success of products making their debut Applications with modules that look differently can undermine the application user s confidence in the product The lower their confidence in the application the less they use the product and

come to depend upon it The same can be said at the code level The more modules that are implemented consistently the easier different developers can step in to investigate and resolve problems Cost of development is often measured by productivity or how much code is created to accomplish specific application tasks

Crystal Reports .NET Programming Brian Bischof, 2004 I wrote this book from the perspective of a programmer wanting to learn how to integrate reports within a NET application I've been working with Crystal Reports since Visual Basic 3 and it's always been difficult to find technical information on report writing I spent a year and a half researching what NET programmers need to successfully create implement and deploy a Crystal Reports application I even put the book on the internet for everyone to read for free all of last year This generated an incredible number of emails from programmers telling me what they liked disliked and what was missing from the book I learned that there are two distinct types of NET

programmers using Crystal Reports The first type of programmer doesn't have much experience with Crystal Reports and wants a series of tutorials to help them build reports from scratch For this programmer I wrote 13 chapters which teach you everything about adding reports to ASP.NET and Windows applications It starts with the basics of building reports to adding charts crosstab reports sorting and grouping subreports and using the formula editor with Basic syntax and Crystal syntax The second type of programmer has been using Crystal Reports for years and is mostly concerned with how to do technical runtime customization of reports For this programmer I researched and diagrammed the undocumented report object models I included dozens of examples in both VB.NET and C to show you how to modify reports manipulate different data sources XML ADO.NET ODBC OLE DB stored procedures with parameters modify formulas and report parameters and integrate .NET with the RAS and RDC The dozens of emails I received when the book was online were instrumental for doing a major revision of many chapters before publishing the book in hardcopy format Since releasing the book I continue to receive more emails from people They regret that the free book isn't online anymore but understand that it couldn't last forever and that the hardcopy version is even better I hope you like it and that it helps you achieve your reporting goals September 2004 Update Due to high demand I did a second printing of the book I took advantage of this opportunity to go through the book and remove all grammatical errors The content is the same but the typos have been corrected
