**Targeting social assistance in fragile settings: An experiment on community-based targeting** Abay, Kibrom A., Berhane, Guush, Gilligan, Daniel O., Tafere, Kibrom, Taffesse, Alemayehu Seyoum, 2024-11-13 Targeting is an important but challenging process in the design and delivery of social and humanitarian assistance programs Community based targeting CBT approaches are often preferred for their local information advantages especially when data driven methods are not feasible However how different variants of CBT approaches fare under various constraints and environments remains unclear For example it is not obvious whether agents involved in CBT maximize the number of beneficiaries or the intensity of transfers when given different levels of discretion or they face budget constraints We implemented a clustered randomized control trial among community leaders in 180 villages in Ethiopia to evaluate how community leaders target and allocate resources when they face budget constraints and are in the presence absence of discretion We find that under resource constraints community leaders prefer to maximize the number of beneficiaries even at the expense of thinly spreading budgets reducing average transfers to beneficiaries Community leaders are keen to minimize exclusion errors even at the expense of increased inclusion errors suggesting that community leaders may be sensitive to potential communal repercussions and hence prefer to accommodate beneficiaries who would otherwise be excluded based on survey based measures and indicators of poverty Consistent with this we find that offering community leaders some level of discretion helps them reduce exclusion errors and include those most deprived or those affected by armed conflicts Finally we find that community leaders are more vulnerable to favoritism when real stakes rather than hypothetical are involved budgets are relatively larger and they lack discretion We offer nuanced evidence about the implications of implementing CBT designs in the absence of incentives for community leaders to reveal how they use local information

**Applied Economics for Development: Empirical Approaches to Selected Social and Economic Issues in Transition Economies** Mahmut Zortuk, 2018-01-15 Transition economies experience transformation of their economic system Following the disintegration of the Soviet Union a number of former socialist countries underwent transitions from central planning to a market economy More generally many rapidly

growing economies undergo no less profound transformations of their economic systems. Contrary to common misconception, the transition process cannot be simply reduced to eliminating state intervention and liberalizing the economy. Economies under transition exhibit a unique set of policy challenges. Unlike developed market economies, missing markets or market failures abound. Economic transformation takes the form of rapidly evolving patterns of international trade and investment, industrial structure and consumption. These changes call for appropriate public policies. A continuing flow of investment hinges on suitable institutions, the provision of public infrastructure and other public goods. Adequate regulation can be central in ensuring that environmental resources are sustainably managed. And sophisticated production systems call for corresponding social institutions in terms of education, health and welfare provisions. In all these cases, accurate empirical assessments are central to the design of effective policy. This book presents a selection of pressing economic and social issues in transition economies. Selected issues include the development of particular industrial sectors, the drivers and consequences of foreign direct investment, public finances, urbanization, social indicators, environmental policy and energy diversification. In each case, an original empirical analysis is performed using a variety of advanced quantitative methods applied to recent data. The book will be of interest to economists studying transition economies, economic development or having a general interest in applied economics. It will be of particular interest to applied economists, policy analysts and policy makers in transition economies concerned with the shape and direction of appropriate economic reforms.

Encyclopedia of Cryptography, Security and Privacy Sushil Jajodia, Pierangela Samarati, Moti Yung, 2025-01-10 A rich stream of papers and many good books have been written on cryptography security and privacy but most of them assume a scholarly reader who has the time to start at the beginning and work his way through the entire text The goal of Encyclopedia of Cryptography Security and Privacy Third Edition is to make important notions of cryptography security and privacy accessible to readers who have an interest in a particular concept related to these areas but who lack the time to study one of the many books in these areas The third edition is intended as a replacement of Encyclopedia of Cryptography and Security Second Edition that was edited by Henk van Tilborg and Sushil Jajodia and published by Springer in 2011 The goal of the third edition is to enhance on the earlier edition in several important and interesting ways First entries in the second edition have been updated when needed to keep pace with the advancement of state of the art Second as noticeable already from the title of the encyclopedia coverage has been expanded with special emphasis to the area of privacy Third considering the fast pace at which information and communication technology is evolving and has evolved drastically since the last edition entries have been expanded to provide comprehensive view and include coverage of several newer topics

Guide to Wireless Sensor Networks Sudip Misra, Isaac Woungang, Subhas Chandra Misra, 2009-05-29 Overview and Goals Wireless communication technologies are undergoing rapid advancements The last few years have experienced a steep growth in research in the area of wireless sensor networks WSNs In WSNs communication takes place with the help of spatially distributed autonomous sensor nodes equipped to sense specific information WSNs especially the ones that have gained much popularity in the recent years are typically ad hoc in nature and they inherit many characteristics features of wireless ad hoc networks such as the ability for infrastructure less setup minimal or no reliance on network planning and the ability of the nodes to self organize and self configure without the involvement of a centralized network manager router access point or

a switch These features help to set up WSNs fast in situations where there is no existing network setup or in times when setting up a fixed infrastructure network is considered infeasible for example in times of emergency or during relief operations WSNs find a variety of applications in both the military and the civilian population worldwide such as in cases of enemy intrusion in the battlefield object tracking habitat monitoring patient monitoring fire detection and so on Even though sensor networks have emerged to be attractive and they hold great promises for our future there are several challenges that need to be addressed Some of the well known challenges are attributed to issues relating to coverage and deployment scalability quality of service size computational power energy efficiency and security
