Coastal Hydrology and Processes American Institute of Hydrology. Meeting, 2006 **Stormwater Management Manual** American Public Works Association, 2021-03-03 The Stormwater Management Manual is designed for stormwater managers and those seeking certification as an APWA Certified Stormwater Manager as well as those wishing to gain an overview of programs and practices This manual addresses the technical knowledge stormwater managers need to make meaningful water quality improvement It covers old and new stormwater management techniques management of new development and redevelopment funding and financing and political and social factors of stormwater management programs

Ecological Engineering Design Marty D. Matlock, Robert A. Morgan, 2011-03-29 Ecologically sensitive building and landscape design is a broad intrinsically interdisciplinary field Existing books independently cover narrow aspects of ecological design in depth hydrology ecosystems soils flora and fauna etc but none of these books can boast of the integrated approach taken by this one Drawing on the experience of the authors this book begins to define explicit design methods for integrating consideration of ecosystem processes and services into every facet of land use design management and policy The approach is to provide a prescriptive approach to ecosystem design based upon ecological engineering principles and practices This book will include a novel collection of design methods for the non built and built environments linking landscape design explicitly to ecosystem services

treatment of waste and the appropriate use of waste streams the book satisfies the needs of a modern landfill covering waste pre treatment in situ treatment long term behavior closure aftercare environmental impact and sustainability It is written for practitioners who need specific information on landfill construction and operation but is also ideal for those concerned about the possible return of these sites to landscapes and their subsequent uses for future generations Includes input by international contributors from a vast number of disciplines Provides worldwide approaches and technologies Showcases the interdisciplinary nature of the topic Focuses on sustainability covering the lifecycle of landfills under the concept of minimizing environmental impact Presents knowledge of the legal framework and economic aspects of landfilling **Urban**

Remote Sensing Xiaojun Yang, 2011-03-23 Urban Remote Sensing is designed for upper level undergraduates graduates researchers and practitioners and has a clear focus on the development of remote sensing technology for monitoring synthesis and modeling in the urban environment It covers four major areas the use of high resolution satellite imagery or alternative sources of image data such as high resolution SAR and LIDAR for urban feature extraction the development of improved image processing algorithms and techniques for deriving accurate and consistent information on urban attributes from remote sensor data the development of analytical techniques and methods for deriving indicators of socioeconomic and environmental conditions that prevail within urban landscape and the development of remote sensing and spatial analytical techniques for urban growth simulation and predictive modeling *Wastewater Treatment Plants* Syed R. Qasim, 2017-11-22 Step by step procedures for planning design construction and operation Health and environment Process improvements Stormwater and combined sewer control and treatment Effluent disposal and reuse Biosolids disposal and reuse On site treatment and disposal of small flows Wastewater treatment plants should be designed so that the effluent standards and reuse objectives and biosolids regulations can be met with reasonable ease and cost The design should incorporate flexibility for dealing with seasonal changes as well as long term changes in wastewater quality and future regulations Good planning and design therefore must be based on five major steps characterization of the raw wastewater quality and effluent pre design studies to develop alternative processes and selection of final process train detailed design of the selected alternative contraction and operation and maintenance of the completed facility Engineers scientists and financial analysts must utilize principles from a wide range of disciplines engineering chemistry microbiology geology architecture and economics to carry out the responsibilities of designing a wastewater treatment plant The objective of this book is to present the technical and nontechnical issues that are most commonly addressed in the planning and design reports for wastewater treatment facilities prepared by practicing engineers Topics discussed include facility planning process description process selection logic mass balance calculations design calculations and concepts for equipment sizing Theory design operation and maintenance trouble shooting equipment selection and specifications are integrated for each treatment process Thus delineation of such information for use by students and practicing engineers is the main purpose of this book **Flood Routing in Ungauged**

Catchments Using Muskingum Methods Mesfin H. Tewolde, 2008-03-27 River stage or flow rates are required for the design and evaluation of hydraulic structures. Most river reaches are ungauged and a methodology is needed to estimate the stages or rates of flow at specific locations in streams where no measurements are available. Flood routing techniques are utilised to estimate the stages or rates of flow in order to predict flood wave propagation along river reaches. Models can be developed for gauged catchments and their parameters related to physical characteristics such as slope, reach width, reach length so that the approach can be applied to ungauged catchments in the region. The objective of this study is to assess Muskingum based methods for flow routing in ungauged river reaches both with and without lateral inflows. Using observed data, the model parameters were calibrated to assess performance of the Muskingum flood routing procedures and the Muskingum-Cunge method was then assessed using catchment derived parameters for use in ungauged river reaches. The Muskingum parameters were derived from empirically estimated variables and variables estimated from assumed river cross sections within the selected river reaches. Three sub-catchments in the Thukela catchment in KwaZulu Natal, South Africa, were selected for analyses with river lengths of 4, 21 and 54 km. The slopes of the river reaches and reach lengths were derived from a digital elevation model. Manning roughness coefficients were estimated from field observations. Flow variables such as velocity, hydraulic radius, wetted perimeters, flow depth and top flow width were determined from empirical equations and cross sections of the selected rivers. Lateral inflows to long river reaches were estimated from the Saint Venant equation. Observed events were extracted for each sub-catchment to assess the Muskingum-Cunge parameter estimation method and Three-parameter Muskingum method. The extracted events were further analysed using empirically estimated flow variables. The performances of the methods were evaluated by comparing both graphically and statistically the simulated and observed hydrographs. Sensitivity analyses were undertaken using three selected events and a 50% variation in selected input variables was used to identify sensitive variables. The performance of the calibrated Muskingum-Cunge flood routing method using observed hydrographs displayed acceptable results. Therefore, the Muskingum-Cunge flood routing method was applied in ungauged catchments with variables estimated empirically. The results obtained show that the computed outflow hydrographs generated using the Muskingum-Cunge method with the empirically estimated variables and variables estimated from cross sections of the selected rivers resulted in reasonably accurate computed outflow hydrographs with respect to peak discharge, timing of peak flow and volume. From this study, it is concluded that the Muskingum-Cunge method can be applied to route floods in ungauged catchments in the Thukela catchment and it is postulated that the method can be used to route floods in other ungauged rivers in South Africa.
