

What is the world made of?

Elementary Science

Big Idea: Solids, liquids, and gas is all matter with different properties.

Grade Level: Third

Rationale: I am teaching this lesson so students will understand that different types of matter have different properties. Students are learning this material so that they will be able to explain in their own words the properties of matter. This connects to their lives because our world is made up of matter.

NC Essential Standard(s): 3.P.2.2 Compare solids, liquids, and gases based on their basic properties.

Next Generation Science Standard(s):

2-PS1-1. Plan and conduct an investigation to describe and classify different kinds of materials by their observable properties. [Clarification Statement: Observations could include color, texture, hardness, and flexibility. Patterns could include the similar properties that different materials share.]

Instructional Objective: Students will be able to compare solids, liquids, and gases based on their basic properties. Students will be able to name one basic property for solids, liquids and gases. Students will be able to point out objects of matter that they see in everyday life and will be able to compare the objects.

Prerequisite knowledge and skills: Students will already know that matter takes up space and can be presented in different forms. Students will know that matter can be a solid, a liquid, or a gas.

the different learning styles preferences and needs of your students We will explore some popular methods such as direct instruction inquiry based learning cooperative learning project based learning and flipped learning How can you structure your lesson in a logical and coherent way and how can you plan for transitions feedback and assessment We will provide a typical lesson structure that consists of an introduction development and conclusion and explain how to use each phase effectively How to prepare the materials and resources that you will use to support your teaching and learning and how to ensure that they are clear accurate appropriate and engaging We will also give you tips on how to check and troubleshoot your materials before using them How to anticipate and overcome the possible challenges that you might face during your lesson and how to be flexible and adaptable to adjust your lesson according to the situation and feedback from your students We will also help you plan for contingencies and emergencies that might occur How to evaluate and reflect on your lesson after delivering it how to identify the strengths and weaknesses of your lesson and the areas that need more attention or revision We will also show you how to use various sources of evidence to assess the effectiveness of your lesson such as student work feedback observation and self evaluation By reading this book you can learn how to plan your lessons in a more efficient and effective way and how to improve your teaching and learning outcomes You will also gain more confidence and satisfaction as teachers and enjoy your teaching more This book is suitable for teachers of any subject level or context whether teaching in a classroom online or in a hybrid setting It is also useful for teacher educators mentors coaches and anyone who wants to support teachers in improving their lesson planning skills

Everyday Matters in Science and Mathematics Ricardo Nemirovsky, Ann S. Rosebery, Jesse Solomon, Beth Warren, 2004-12-13 This book re examines the dichotomy between the everyday and the disciplinary in mathematics and science education and explores alternatives to this opposition from points of view grounded in the close examination of complex classroom events It makes the case that students everyday experience and knowledge in their entire manifold forms matter crucially in learning sciences and mathematics The contributions of 13 research teams are organized around three themes 1 the experiences of students in encounters with everyday matters of a discipline 2 the concerns of curriculum designers including teachers as they design activities intended to focus on everyday matters of a discipline and 3 the actions of teachers as they create classroom encounters with everyday matters of a discipline As a whole the volume reflects the shift in the field of educational research in recent years away from formal structural models of learning toward emphasizing its situated nature and the sociocultural bases of teaching and learning At least two trends increasing awareness that formal theories can be useful guides but are always partial and provisional in how they disclose classroom experiences and the widespread availability of video and audio equipment that enables effortless recording of classroom interactions have reoriented the field by allowing researchers and teachers to look at learning starting with complex classroom events rather than formal theories of learning Such examinations are not meant to replace the work on general theoretical frameworks but to ground them in actual complex

events This reorientation means that researchers and teachers can now encounter the complexity of learning and teaching as lived human meaning making experiences Immersion in this complexity compels rethinking assumptions about the dichotomies that have traditionally organized the field s thinking about learning Further it has important implications for how the relationship between theory and practice in understanding teaching and learning is viewed Everyday Matters in Science and Mathematics Studies of Complex Classroom Events is an important resource for researchers teacher educators and graduate students in mathematics and science education and a strong supplemental text for courses in these areas and also in cognition and instruction and instructional design

Contexts of Learning Mathematics and Science Sarah J. Howie,Tjeerd Plomp,2006-04-18 This book is the result of research from over fifteen countries asking which background and environmental factors influence achievement in mathematics and science This research is based on data from the Third International Mathematics and Science Study TIMSS which was conducted under the auspices of the International Association for the Evaluation of Educational Achievement IEA in 1995 and 1998 In many countries researchers have started secondary analysis of the data in search for relationships between contextual factors and achievement In these analyses two different approaches can be distinguished which can be characterised by the metaphors of fishing and hunting In the fishing approach researchers begin with an open mind considering all possible context variables as potentially influential Applying analysis techniques such as regression analysis Lisrel PLS HLM and MLN they then identify important factors within their countries or across a number of countries In the hunting approach researchers hypothesise certain context variables and trace the effect of these variables on mathematics and or science achievement
