Inducing Genetic Change In Cancer Cells Using Lasers:

Cancer: Cell Structures, Carcinogens and Genomic Instability Leon P. Bignold, 2006 Tumors can be induced by a variety of physical and chemical carcinogens The resulting tumor cells are usually abnormal in their morphology and behavior and transmit their abnormalities to their daughter tumor cells Most theories of the pathogenesis of tumors suggest that carcinogens in some way cause alterations either of the genomes or of inheritable patterns of gene expression in normal cells which then cause morphological and behavioral changes This volume presents a collection of articles aimed at the question by what genetic or epigenetic mechanisms carcinogens can cause morphological abnormalities of tumor cells It includes reviews of cellular targets of known carcinogens and presents varying viewpoints of how morphological abnormalities and the actions of carcinogens might be related The volume will be of interest to all those who are involved in cancer research or in the prevention diagnosis or management of tumors in humans or animals

Inducing Genetic Change in Cancer Cells Using Lasers Muhammad Waleed, 2014-12-04 In this book we demonstrate a new single cell optoporation and transfection technique using femtosecond Gaussian laser beam and optical tweezers Tightly focused near infrared NIR femtosecond laser pulse was employed to transiently perforate the cellular membrane at a single point of MCF 7 cancer cell A distinct technique is developed by trapping the microparticle using optical tweezers to focus femtosecond laser exactly on the cell membrane to puncture it for the desired time Subsequently calculated amount of external gene was introduced in the cell by trapping and inserting same plasmid coated microparticle into optoporated cell using optical tweezers Various experimental parameters such as femtosecond laser exposure power exposure time punctured hole size exact focusing of femtosecond laser and cell healing time were closely analyzed to optimize the best conditions for cell viability Trapped particle position is detected by another co aligned continuous wave laser In the end after insertion of plasmid coated microparticle the targeted cells exhibited green fluorescent protein GFP under the fluorescent microscope hence confirming successful genetic change

Laser-Driven Particle Acceleration Towards Radiobiology and Medicine Antonio Giulietti, 2016-05-04 This book deals with the new method of laser driven acceleration for application to radiation biophysics and medicine It provides multidisciplinary contributions from world leading scientist in order to assess the state of the art of innovative tools for radiation biology research and medical applications of ionizing radiation The book contains insightful contributions on highly topical aspects of spatio temporal radiation biophysics evolving over several orders of magnitude typically from femtosecond and sub micrometer scales Particular attention is devoted to the emerging technology of laser driven particle accelerators and their application to spatio temporal radiation biology and medical physics customization of non conventional and selective radiotherapy and optimized radioprotection protocols
