Assessing the rapid evolution of automation and optimization in control systems used in all types of industrial plants, this book details the wired, wireless, communications, and software used. This includes the ever-increasing number of applications for intelligent instruments, enhanced networks, Internet use, virtual private networks, and integration of control systems with the main networks used by management, all of which operate in a linked global environment. Topics covered include: Advances in new displays which help operators to more quickly assess and respond to plant conditions; Software and networks that help monitor control and optimize industrial processes to determine the efficiency, energy consumption, and profitability of operations; Strategies to counteract changes in market conditions and energy and raw material costs; Techniques to fortify the safety of plant operations and the security of digital communications systems. This volume explores why the holistic approach to integrating process and enterprise networks is convenient and efficient despite associated problems involving cyber and local network security, energy conservation, and other issues. It shows how firewalls must separate the business IT and the operation automation technology.
