Figure 7. Scatter plot showing the relationship between the number of days spent in hospital and the number of days spent in nursing home. The x-axis represents the number of days spent in hospital, ranging from 0 to 60. The y-axis represents the number of days spent in nursing home, ranging from 0 to 60. A positive correlation is evident, with a regression line fitted to the data points.

These two equations define the *addition* of two operators as well as the *multiplication* of two operators – a very important mathematical operation. Therefore, the *fundamental laws* of quantum mechanics are *operator laws*. **Equation 1** – which gives the *addition* of two operators – is the *commutator* – sometimes *poissonian* – as opposed to *noncommutative*. Another *key* relation is the *Heisenberg uncertainty relation* – which says that the *momentum* and *position* of a particle *cannot* be *precisely* *simultaneously* *known*. (More about this later, as indicated.)
