*Optimization of Pharmaceutical R&D Programs and Portfolios* Zoran Antonijevic, 2014-10-10 Very little has been published on optimization of pharmaceutical portfolios. Moreover, most of published literature is coming from the commercial side where probability of technical success (PoS) is treated as fixed and not as a consequence of development strategy or design. In this book, there is a strong focus on impact of study design on PoS and ultimately on the value of portfolio. Design options that are discussed in different chapters are: dose selection strategies, adaptive design and enrichment. Some development strategies that are discussed are: indication sequencing, optimal number of programs and optimal decision criteria. This book includes chapters written by authors with very broad backgrounds including financial, clinical, statistical, decision sciences, commercial and regulatory. Many authors have long held executive positions and have been involved with decision making at a product or at a portfolio level. As such, it is expected that this book will attract a very broad audience including decision makers in pharmaceutical R&D. However, with a few exceptions, they require a relatively basic knowledge of statistics by a reader.
