Baldwin, 2009. Modern model theory began with Morley's categoricity theorem. A countable first order theory that has a unique up to isomorphism model in one uncountable cardinal κ is categorical in cardinality if and only if the same holds in all uncountable cardinals. Over the last 35 years Shelah made great strides in extending this result to infinitary logic where the basic tool of compactness fails. He invented the notion of an Abstract Elementary Class to give a unifying semantic account of theories in first order infinitary logic and with some generalized quantifiers. Zilber developed similar techniques of infinitary model theory to study complex exponentiation. This book provides the first unified and systematic exposition of this work. The many examples stretch from pure model theory to module theory and covers of Abelian varieties. Assuming only a first course in model theory, the book expounds eventual categoricity results for classes with amalgamation and categoricity in excellent classes. Such crucial tools as Ehrenfeucht Mostowski models, Galois types, tameness, omitting types theorems, multi-dimensional amalgamation, atomic types, good sets, weak diamonds and excellent classes are developed completely and methodically. The occasional reliance on extensions of basic set theory is clearly laid out. The book concludes with a set of open problems. Philosophy and Memory Traces John Sutton, 1998-03-05 Philosophy and Memory Traces defends two theories of autobiographical memory One is a bewildering historical view of memories as dynamic patterns in fleeting animal spirits nervous fluids which rummaged through the pores of brain and body The other is new connectionism in which memories are stored only superpositionally and reconstructed rather than reproduced Both models argues John Sutton depart from static archival metaphors by employing distributed representation which brings interference and confusion between memory traces Both raise urgent issues about control of the personal past and about relations between self and body Sutton demonstrates the role of bizarre body fluids in moral physiology as philosophers from Descartes and Locke to Coleridge struggled to control their own innards and impose cognitive discipline on the phantasmal chaos of association Going on to defend connectionism against Fodor and critics of passive mental representations he shows how problems of the self are implicated in cognitive science
