Sustainable Intensification of Agriculture Jules Pretty, Zareen

Pervez Bharucha, 2018-06-14 Sustainable intensification SI has emerged in recent years as a powerful new conceptualisation of agricultural sustainability and has been widely adopted in policy circles and debates. It is defined as a process or system where yields are increased without adverse environmental impact and without the cultivation of more land. Co-written by Jules Pretty, one of the pioneers of the concept and internationally known and respected authority on sustainable agriculture, this book sets out current thinking and debates around sustainable agriculture and intensification. It recognises that world population is increasing rapidly so that yields must increase on finite land and other resources to maintain food security. It provides the first widely accessible overview of the concept of SI as an innovative approach to agriculture and as a key element in the transition to a green economy. It presents evidence from around the world to show how various innovations are improving yields, resilience and farm incomes, particularly for resource-constrained smallholders in developing countries but also in the developed world. It shows how SI is a fundamental departure from previous models of agricultural intensification. It also highlights the particular role and potential of small-scale farmers and the fundamental importance of social and human capital in designing and spreading effective innovations.

Adapting to Climate Uncertainty in African Agriculture Stephen Whitfield, 2015-08-20 Future climatic and agro-ecological changes in Africa are uncertain and associated with high degrees of spatial and temporal variability and this change is differently simulated within divergent climate crop models and in controlled crop breeding stations. Furthermore, uncertainty emerges in local contexts not just in response to climatic systems but to social, economic and political systems and often with implications for the appropriateness and adoption of technologies or the success of alternative cropping systems. This book examines the challenges of adaptation in smallholder farming in Africa, analysing the social, economic, political and climatic uncertainties that impact on agriculture in the region and the range of solutions proposed. Drawing on case studies of genetically modified crops, conservation agriculture and other climate-smart solutions in eastern and southern Africa, the book identifies how uncertainties are framed from above as well as experienced from below by farmers themselves. It provides a compelling insight into why ideas about adaptation emerge from whom and with what implications. This book offers a unique perspective and will be highly relevant to students of climate change, adaptation, food security and poverty alleviation as well as policy makers and field practitioners in international development and agronomy.

Ecology of Protozoa Genoveva F. Esteban, Tom M. Fenchel, 2021-01-04 This book emphasises the important role that protozoa play in many natural ecosystems. To shed new light on their individual adaptive skills, the respective chapters examine the ecology and functional biology of this diverse group of eukaryotic microbes. Protozoa are well-established model organisms that exemplify many general problems in population ecology and community ecology as well as evolutionary biology. Their particular characteristics, like large population sizes, life cycles and motile sensory behaviour, have a profound impact on their survival, distribution and interaction with other species. Thus

readers will also be introduced to protozoan habitats in a broad range of environments Even though this group of unicellular organisms is highly diverse the authors focus on shared ecological patterns Students and scientists working in the areas of eukaryotic microbiology and ecology will appreciate this updated and revised 2nd Edition as a valuable reference guide to the lifestyles of protozoa
