Expert Knowledge And Its Application In Landscape Ecology:

Expert Knowledge and Its Application in Landscape Ecology Ajith H. Perera,C. Ashton Drew,Chris J. Johnson,2011-10-21 Typically landscape ecologists use empirical observations to conduct research and devise solutions for applied problems in conservation and management In some instances they rely on advice and input of experienced professionals in both developing and applying knowledge Given the wealth of expert knowledge and the risks of its informal and implicit applications in landscape ecology it is necessary to formally recognize and characterize expert knowledge and bring rigor to methods for its applications In this context the broad goal of this book is to introduce the concept of expert knowledge and examine its role in landscape ecological applications We plan to do so in three steps First we introduce the topic to landscape ecologists explore salient characteristics of experts and expert knowledge and describe methods used in capturing and formalizing that knowledge Second we present examples of research in landscape ecology from a variety of ecosystems and geographic locations that formally incorporate expert knowledge These case studies address a range of topics that will interest landscape ecologists and other resource management and conservation professionals including the specific roles of expert knowledge in developing testing parameterizing and applying models estimating the uncertainty in expert knowledge developing methods of formalizing and incorporating expert knowledge and using expert knowledge as competing models and a source of alternate hypotheses Third we synthesize the state of knowledge on this topic and critically examine the advantages and disadvantages of incorporating expert knowledge in landscape ecological applications The disciplinary subject areas we address are broad and cover much of the scope of contemporary landscape ecology including broad scale forest management and conservation quantifying forest disturbances and succession conservation of habitats for a range of avian and mammal species vulnerability and conservation of marine ecosystems and the spread and impacts of invasive plants This text incorporates the collective experience and knowledge of over 35 researchers in landscape ecology representing a diverse range of disciplinary subject areas and geographic locations Through this text we will catalyze further thought and investigations on expert knowledge among the target readership of researchers practitioners and graduate students in landscape ecology **Expert Knowledge and Its Application in Landscape Ecology** ,2011-10-22

Applied Landscape Ecology Francisco Castro Rego,Stephen C. Bunting,Eva Kristina Strand,Paulo Godinho-Ferreira,2019-02-04 An insightful guide to the concepts and practices of modern landscape ecology Elements of geography conservation biology soil science and other disciplines factor into landscape ecology s rich analyses of the ecological and environmental forces at play across different terrains With its unique organism oriented approach to the subject Applied Landscape Ecology considers the effects of ecological processes upon particular species and places its findings within the context of larger scale concerns Students researchers and practitioners alike will find this a rewarding and instructive read that offers practical and detailed information on the latest methods and technologies used in the field

today This essential resource Takes an interdisciplinary approach to landscape ecology Examines the subject within the contexts of specific organisms Covers cutting edge technologies and methods Represents a collaboration between an international team of landscape ecology experts Comes with 25 exercises that are freely available from the book companion site Whether new to the practice or an established ecologist anyone with an interest in this exciting and developing field should have a copy of *Applied Landscape Ecology* at their disposal

Predictive Species and Habitat Modeling in Landscape Ecology C. Ashton Drew, Yolanda F. Wiersma, Falk Huettmann, 2010-11-25 Most projects in Landscape Ecology at some point define a species habitat association These models are inherently spatial dealing with landscapes and their configurations Whether coding behavioral rules for dispersal of simulated organisms through simulated landscapes or designing the sampling extent of field surveys and experiments in real landscapes landscape ecologists must make assumptions about how organisms experience and utilize the landscape These convenient working postulates allow modelers to project the model in time and space yet rarely are they explicitly considered The early years of landscape ecology necessarily focused on the evolution of effective data sources metrics and statistical approaches that could truly capture the spatial and temporal patterns and processes of interest Now that these tools are well established we reflect on the ecological theories that underpin the assumptions commonly made during species distribution modeling and mapping This is crucial for applying models to questions of global sustainability Due to the inherent use of GIS for much of this kind of research and as several authors research involves the production of multicolored map figures there would be an 8 page color insert Additional color figures could be made available through a digital archive or by cost contributions of the chapter authors Where applicable would be relevant chapters GIS data and model code available through a digital archive The practice of data and code sharing is becoming standard in GIS studies is an inherent method of this book and will serve to add additional research value to the book for both academic and practitioner audiences

Wildland Fuel Fundamentals and Applications Robert E. Keane, 2014-11-04 A new era in wildland fuel sciences is now evolving in such a way that fire scientists and managers need a comprehensive understanding of fuels ecology and science to fully understand fire effects and behavior on diverse ecosystem and landscape characteristics This is a reference book on wildland fuel science a book that describes fuels and their application in land management There has never been a comprehensive book on wildland fuels most wildland fuel information was put into wildland fire science and management books as separate chapters and sections This book is the first to highlight wildland fuels and treat them as a natural resource rather than a fire behavior input Moreover there has never been a comprehensive description of fuels and their ecology measurement and description under one reference most wildland fuel information is scattered across diverse and unrelated venues from combustion science to fire ecology to carbon dynamics The literature and data for wildland fuel science has never been synthesized into one reference most studies were done for diverse and unique objectives This book is the first to link the disparate fields of ecology wildland fire and carbon to describe fuel science This just deals with the science and ecology of wildland fuels not fuels management However since expensive fuel treatments are being planned in fire dominated landscapes across the world to minimize fire damage to people property and ecosystems it is incredibly important that people understand wildland fuels to develop more effective fuel
