Stanford Experiment on Photosynthesis in Leaf

Objective: Determine the effect of light intensity on the rate of photosynthesis in a leafy shoot.

Apparatus: Leafy shoot, beaker, inverted glass, delivery tube, manometer, sodium hydroxide solution, oxygen gas, water, thermometer, stopwatch, ruler, paper, pencil, graph paper.

1. The purpose of this experiment is to determine the rate of photosynthesis in a leafy shoot.

2. Hypothesis: The rate of photosynthesis will increase with light intensity.

Apparatus

Photosynthesis apparatus

Procedure:

1. The first step is to prepare the leafy shoot by removing the lower leaves and cutting the shoot into small pieces. The shoot is then placed in a beaker of water and the water level is marked.

2. The second step is to set up the manometer. The manometer is a U-shaped tube filled with water. One end of the tube is connected to the leafy shoot and the other end is open to the atmosphere. The water level in the open end is marked.

3. The third step is to measure the rate of photosynthesis. This is done by measuring the volume of oxygen gas produced over a period of time.

4. The fourth step is to calculate the rate of photosynthesis. This is done by dividing the volume of oxygen gas produced by the time taken.

5. The fifth step is to repeat the experiment at different light intensities to see how the rate of photosynthesis changes.

6. The sixth step is to draw a graph of the rate of photosynthesis against light intensity. The graph should show a positive correlation between the two variables.

7. The seventh step is to conclude the experiment. The conclusion should state that the rate of photosynthesis increases with light intensity.

8. The eighth step is to write a report of the experiment. The report should include the aim, hypothesis, apparatus, procedure, results, and conclusion.

9. The ninth step is to present the report to the class. The presentation should include a summary of the experiment and the results.

10. The tenth step is to evaluate the experiment. The evaluation should discuss the strengths and weaknesses of the experiment.

11. The eleventh step is to discuss the experiment with the teacher. The teacher should provide feedback on the experiment and the report.
