Question 1: Le Chatelier's Principle

A closed system having hydrogen gas and iodine gas (H_2 and I_2) at equilibrium. The graph below shows the temperature dependence of the equilibrium constant (K_c) for the reaction. What is the effect of increasing the temperature?

- K_c increases and the concentration of H_2 increases.
- The forward reaction becomes dominant as temperature increases.
- The rate of forward reaction, k_f , increases as temperature increases; the rate of the reverse reaction, k_r , remains constant.
- The activation energy for the reaction does not change.

Correct Answer: B. Increased the forward reaction, K_c , increases as the temperature increases.

Explanation: According to Le Chatelier's principle, if the temperature of a system at equilibrium is increased, the system will shift in the direction that absorbs heat. In this case, the reaction is exothermic, so the system will shift in the direction that absorbs heat, which is the forward reaction.

International Perspectives on the Design of Technology-supported Learning Environments Stella Vosniadou, Erik De Corte, Robert Glaser, Heinz Mandl, 2012-10-12 In recent years the use of technology for the purposes of improving and enriching traditional instructional practices has received a great deal of attention However few works have explicitly examined cognitive psychological and educational principles on which technology supported learning environments are based This volume attempts to cover the need for a thorough theoretical analysis and discussion of the principles of system design that underlie the construction of technology enhanced learning environments It presents examples of technology supported learning environments that cover a broad range of content domains from the physical sciences and mathematics to the teaching of language and literacy The emphasis in this book is not on the design of educational software but on the design of learning environments A great deal of research on learning and instruction has recently moved out of the laboratory into the design of applications in instructional settings By designing technology supported learning environments instructional scientists attempt to better understand the theories and principles that are explicit in their theories of learning The contributors to this volume examine how factors such as social interaction the creation of meaningful activities the use of multiple perspectives and the construction of concrete representations influence the acquisition of new information and transfer

College Teaching and the Development of Reasoning Robert G. Fuller, Thomas C. Campbell, Dewey I. Dykstra, Scott M. Stevens, 2009-10-01 This book is intended to offer college faculty members the insights of the development of reasoning movement that enlighten physics educators in the late 1970s and led to a variety of college programs directed at improving the reasoning patterns used by college students While the original materials were directed at physics concepts they quickly expanded to include other sciences and the humanities and social sciences On going developments in the field will be included The editors have introduced new topics including discussions of Vygotsky s ideas in relation to those of Piaget of science education research progress since 1978 of constructivist learning theory applied to educational computer games and of applications from anthropology to zoology These materials are especially relevant for consideration by current university faculty in all subjects

Exploring Chemistry (Loose-Leaf) Matthew Johll, 2012-05-04 Matthew Johll s Exploring Chemistry covers the standard topics for the nonmajors course in the typical order but each chapter unfolds in the context of a single case study that helps students connect what they are learning to real life situations For example students work through the often difficult topics of molecular structure gas laws and organic chemistry by learning about the development of powerful new chemotherapy drugs new technologies for screening airline passengers and the creation of biodegradable biopolymers It s the same case driven approach that Johll uses in his acclaimed Investigating Chemistry now in its Third Edition but Exploring Chemistry goes beyond the other book s specific focus on examples from forensic science to use real life stories from cooking athletics genetics green chemistry and more
