(pages 270-274)

Key Concepts

- What is the principle of independent assortment?
- What inheritance patterns exist aside from simple dominance?

Independent Assortment (pages 270-271)

1. In a two-factor cross, Mendel followed _____, different genes as they passed from one generation to the next.

2. Write the genotypes of the true-breeding plants that Mendel used in his two-factor cross.

Phenotype

Genotype

a. round yellow peas

b. wrinkled green peas

3. Circle the letter that best describes the F_1 offspring of Mendel's two-factor cross.

- a. Homozygous dominant with round yellow peas
- b. Homozygous recessive with wrinkled green peas
- c. Heterozygous dominant with round yellow peas
- d. Heterozygous recessive with wrinkled green peas

4. Is the following sentence true or false? The genotypes of the F_1 offspring indicated to Mendel that genes assort independently.

5. How did Mendel produce the F_2 offspring? _____

6. Circle the letter of the phenotypes that Mendel would expect to see if genes segregated independently.

- a. round and yellow
- b. wrinkled and green
- c. round and green
- d. wrinkled and yellow

7. What did Mendel observe in the F_2 offspring that showed him that the alleles for seed shape segregate independently of those for seed color? _____

8. What were the phenotypes of the F_2 generation that Mendel observed? _____

David Paul von Hansemann: Contributions to Oncology Leon P. Bignold, Brian L. D. Coghlan, Hubertus P.A. Jersmann, 2007-02-15 In 1890 just a few years after the discovery of the chromosomes David Paul Hansemann a pathologist in training with the famous Rudolph Virchow in Berlin produced a theory of the pathogenesis of cancer involving the key current concept that the first change which occurs in cancer is an alteration of the hereditary material of a normal cell at the site where the cancerous process begins In the process of linking cancer to chromosomal material Hansemann coined the terms anaplasia and dedifferentiation These terms have remained the basis of descriptive terms concerning the microscopical appearances of tumours ever since Nevertheless despite the popularity of his terminology Hansemann's ideas were attacked vigorously by almost all proponents of rival theories of the nature of cancer Partly due to these disputes during his life time and partly due to other factors interest in von Hansemann's ideas diminished during the twentieth century and his works are rarely mentioned today This book presents translations of all the relevant German texts and analyses the background and context of Hansemann's theories as well as the reasons why he was almost completely forgotten It shows that some of Hansemann's ideas may still be relevant to cancer research today and that he deserves to be remembered in relation to cancer as Vordenker unter den f hrenden Denkern seiner Zeit The foremost of the leading thinkers of his time

Exploring Causal Risk Factors for Metabolic and Endocrine Disorders Youxin Wang, Xiao Wang, Haifeng Hou, Di Liu, 2024-02-15 Metabolic and endocrine disorders are the main burden of noncommunicable chronic diseases and they serve as important risk factors for cardiovascular diseases or multiple cancers To date a large number of correlates have been identified but few of them were modifiable and causal In general causal relationships can be conceptualized not only in a probabilistic sense involving statistical terms and procedures but also in the complexity of biological phenomena The limited understanding of many underlying mechanisms hinders a deterministic conceptualization of disease causation The identification of modifiable risk factors that have a causal effect on the incidence of these diseases and their complications is critical to the primary or secondary prevention of metabolic and endocrine diseases
