

Exponential Growth - Homework

1. When a bacterial colony was first observed, there were 1000 bacteria. After 2 hours, the colony had grown to 1500 bacteria. How many bacteria will there be after 4 hours?

- a) Write a differential equation that represents this situation, and then solve the equation for the value of $t = 4$.

$$\frac{dy}{dt} = ky$$

$$y = 1000e^{kt}$$

- b) Express the situation above mathematically in terms of $y(0)$. How much will the colony be after 4 hours? What is the growth constant that represents the data for some other t ? How much will be?

$$y(0) = 1000$$

$$y = 1500 \text{ when } t = 2$$

$$y = 1500 \text{ when } t = 2$$

- c) Sketch the graph of the solution for $t \geq 0$.

- d) What will be the population of the colony after 4 hours? How much will be after 6 hours?

$$y = 1000e^{kt}$$

$$y = 1000e^{k \cdot 4}$$

- e) How much will the colony be after 4 hours? How much will be after 6 hours?

$$y = 1000e^{kt}$$

$$y = 1000e^{k \cdot 4}$$

$$y = 1000e^{k \cdot 6}$$

- f) At what time will the population of the colony be 1500?

- g) At what time will the population of the colony be 2000?

$$y = 1000e^{kt}$$

$$y = 1000e^{k \cdot 4}$$

- h) At what time will the population of the colony be 2000?

- i) At what time will the population of the colony be 2000?

2. Explain why an integral equation that describes a situation is not the same as a differential equation that describes the same situation. Then give an example of a situation that can be described by both an integral equation and a differential equation. Explain why both equations are needed to describe the situation.

- a) When a differential equation that represents a situation is solved, what is the general solution? What is the particular solution? What is the initial condition?

$$\frac{dy}{dt} = ky$$

$$y = 1000e^{kt}$$

- b) When a differential equation that represents a situation is solved, what is the general solution? What is the particular solution? What is the initial condition?

$$y = 1000e^{kt}$$

$$y = 1000e^{kt}$$

Networking of Theories as a Research Practice in Mathematics Education Angelika Bikner-Ahsbahr, Susanne Prediger, 2014-08-25 How can we deal with the diversity of theories in mathematics education This was the main question that led the authors of this book to found the Networking Theories Group Starting from the shared assumption that the existence of different theories is a resource for mathematics education research the authors have explored the possibilities of interactions between theories such as contrasting coordinating and locally integrating them The book explains and illustrates what it means to network theories it presents networking as a challenging but fruitful research practice and shows how the Group dealt with this challenge considering five theoretical approaches namely the approach of Action Production and Communication APC the Theory of Didactical Situations TDS the Anthropological Theory of the Didactic ATD the approach of Abstraction in Context AiC and the Theory of Interest Dense Situations IDS A synthetic presentation of each theory and their connections shows how the activity of networking generates

questions at the theoretical methodological and practical levels and how the work on these questions leads to both theoretical and practical progress The core of the book consists of four new networking case studies which illustrate what exactly can be gained by this approach and what kind of difficulties might arise
