

Dependent Equations: Plug and Solve **NOT**

Read about each situation. Decide whether each problem requires you to **substitute** or **plug and solve**. Write the strategy below. Show the steps that lead to your answer.

1. Paper

A piece of paper is rectangular in shape. It is 100% taller than it is wide. The piece is 100% wider than it is tall. If you fold it in half again, it would be 100% wider than it is tall, and 100% taller than it is wide. The equation for the area of the paper after x folds is:

$$P(x) = 1000(2^x)^2$$

a. Determine the dimensions of the paper after 2 folds.

100% = 1000 mm

b. How long and wide is the paper in standard units after 2 folds? It would require 1000 mm in height (1 foot tall) and 1000 mm in length (1 foot).

1000 mm
1000 mm
1000 mm

1000 mm = 1000 mm

2. Investment

Five friends _____

The balance of an investment after 2 years:

a. How much was invested initially?

1000 = 10000

b. How much would be in the account after 2 years, and 4 years?

10000 = 100000

c. How long would it take for the investment to reach a value of 100,000?

3. Game System

When a new game system first came out, it cost \$100. Over the next couple of years, however, the price fell to a current price of \$50. If you had that \$100 after an interest rate of 10%:

$$100(1 - 0.10)^2 = 81$$

a. How long would it take before the price of the game system fell to \$50?

100 = 10000
100 = 10000
100 = 10000

b. What was the cost of the game system after 2 years?

10000 = 10000

4. Population

Initially, more than 1000 people lived in a city. After they started to grow, the population increased rapidly at first. The population increased the population of the city.

$$1000 = 1000 + 1000(1.10)^2$$

a. How long did it take for the population to reach 1000?

1000 = 1000

b. How long did it take for the population to reach 1000?

1000 = 1000

c. How long did it take for the population to reach 1000?

1000 = 1000

Chemical Reaction Engineering and Reactor Technology, Second Edition Tapio O. Salmi, Jyri-Pekka Mikkola, Johan P. Wörnå, 2019-07-11 The role of the chemical reactor is crucial for the industrial conversion of raw materials into products and numerous factors must be considered when selecting an appropriate and efficient chemical reactor Chemical Reaction Engineering and Reactor Technology defines the qualitative aspects that affect the selection of an industrial chemical reactor and couples various reactor models to case specific kinetic

expressions for chemical processes Thoroughly revised and updated this much anticipated Second Edition addresses the rapid academic and industrial development of chemical reaction engineering Offering a systematic development of the chemical reaction engineering concept this volume explores essential stoichiometric kinetic and thermodynamic terms needed in the analysis of chemical reactors homogeneous and heterogeneous reactors reactor optimization aspects residence time distributions and non ideal flow conditions in industrial reactors solutions of algebraic and ordinary differential equation systems gas and liquid phase diffusion coefficients and gas film coefficients correlations for gas liquid systems solubilities of gases in liquids guidelines for laboratory reactors and the estimation of kinetic parameters The authors pay special attention to the exact formulations and derivations of mass energy balances and their numerical solutions Richly illustrated and containing exercises and solutions covering a number of processes from oil refining to the development of specialty and fine chemicals the text provides a clear understanding of chemical reactor analysis and design

Level Crossing Methods in Stochastic Models Percy H. Brill,2008-12-03 From 1972 to 1974 I was working on a PhD thesis entitled Multiple Server Queues with Service Time Depending on Waiting Time The method of analysis was the embedded Markov chain technique described in the papers 82 and 77 My analysis involved lengthy tedious deri tions of systems of integral equations for the probability density function pdf of the waiting time After pondering for many months whether there might be a faster easier way to derive the integral equations I nally discovered the basic theorems for such a method in August 1974 The theorems establish a connection between sample path level crossing rates of the virtual wait process and the pdf of the waiting time This connection was not found anywhere else in the literature at the time I immediately developed a comprehensive new methodology for deriving the integral equations based on these theorems and called it system point theory Subsequently it was called system point method or system point level crossing method SPLC or simply LC I rewrote the entire PhD thesis from November 1974 to March 1975 using LC to reach solutions The new thesis was called System Point Theory in Exponential Queues On June 12 1975 I presented an invited talk on the new methodology at the Fifth Conference on Stochastic Processes and their Applications at the University of Maryland Many queueing theorists were present
