The Handbook of Antagonism Joshua W. Miller,Donald Lynam,2019-02-19 The Handbook of Antagonism Conceptualizations Assessment Consequences and Treatment of the Low End of Agreeableness looks at the theoretical and

empirical underpinnings of antagonism highlighting the consequences of the trait its role in a number of problem behaviors and psychiatric disorders and how it exerts itself on externalizing behaviors Covering the biological and evolutionary roots of antagonism the book provides clinical insight on assessment strategies while also outlining a number of treatment techniques including motivational interviewing cognitive behavioral therapy interpersonal psychology and psychodynamic treatment approaches In addition the book explores the development of antagonism across childhood and adolescence discussing the societal consequences of the trait as well as its role in a number of problem behaviors such as aggression violence crime and substance use      Colour and Form Perception: Straddling the Boundary Galina V. Paramei,Cees van Leeuwen,2016-05-31

Starting from psychophysics over the last 50 years most progress in unravelling the mechanisms of color vision has been made through the study of single cell responses mainly in LGN and striate cortex A similar development in the study of form perception may seem to be underway centred on the study of temporal cortex However because of the combinatorial characteristics of form perception we are also observing the opposite tendency from single cell activity to population coding and from static receptive field structures to system dynamics and integration and ultimately a synthetic form of psychophysics of color and form perception From single cells to system integration it is this development the present Research Topic wishes to highlight and promote How does this development affect our views on the various attributes of perception In particular we are interested in to what extent evolving knowledge in the field of color perception is relevant within a developing integrative framework of form perception The goal of this Research Topic is to bring together experimental research encompassing both color and form perception For this volume we planned a broad scope of topics on color in complex scenes color and form as well as dynamic aspects of form perception We expect that the Research Topic will be attractive to the community of researchers whose work straddles the boundary between the two visual perception fields as well as to the wider community interested in integrative systems neuroscience      *Design of Hardware/Software Embedded*

*The Oxford Handbook of the Five Factor Model* Thomas A. Widiger,2017 There is a vast body of research supporting the Five Factor Model as the predominant model of general personality structure within the field of social psychology The Oxford Handbook of the Five Factor Model is dedicated to this model of research      Fairness, Justice and Language Assessment

Tim McNamara,Ute Knoch,2019-02-21 This book has two goals each related to the validity of language assessment The first goal is to explore the difference between fairness and justice in language assessment The authors distinguish internal and external dimensions of the equitable and just treatment of individuals taking language tests which are used as gatekeeping devices to determine access to education and employment immigrant status citizenship and other rights The second goal is to show how the extent of test fairness can be demonstrated and improved using the tools of psychometrics in particular the models collectively known as Rasch measurement This book will have an enormous impact on the field of language assessment Using Rasch analysis models to explore and identify sources of unfairness the authors make a compelling case for fairness in the design and implementation of language assessment instruments and for justice in the interpretation and use of test results A real strength of the book is that it guides readers through analytical techniques in an accessible way Dan Douglas Professor Emeritus Applied Linguistics Program Iowa State University      **New Publications of the U.S.**

*Advances in Facet Theory Research: Developments in Theory, Application and Related Approaches* Paul M. W. Hackett,Yael Fisher,2019-11-01 In this Research Topic the two editors bring together a series of articles that use facet theory and allied approaches to research Since its inception in the work of Louis Guttman in the mid twentieth century facet theory has become an established approach within social science research In addition over the past 70 years a wide range of research publications have appeared operating within the theoretical and analytic rubric of facet theory and for the last two decades a biennial international conference has been held devoted to facet theory research When using a facet theory approach an implicit aim of the research within this framework is to bring together in an explicit manner a clear definition of

the content area that is being investigated along with data analysis procedures Integrating the explicit design of research content for example attitudes values etc and its subsequent analysis for example to identify the variables that are influential to respondents in relation to the specific area under investigation allows for the construction of theory relating to the content area and for the meaningful measurement of complex research areas The clear explication of an area of research content is achieved through the use of a mapping sentence MS In a MS all of the pertinent variables called facets associated with the specific subject matter of the research study are specified in the form of a natural language sentence where facets variables are arrange to demonstrate how these theoretically relate to each other Sub levels of facets are defined in such a way as to capture the relationships of research variables facets to each other and the overall research domain Background variables are also stated in the MS along with a specified range over which observations will be made to test the veracity of the structural hypotheses statements regarding the proposed manner in which variables are related to the study s content implicit in the MS Furthermore by using a MS the researcher is able to select variables that appropriately address the area of content Traditionally facet theory has been used in quantitative research but has recently been applied to the analysis of qualitative and philosophical research which incorporates a declarative mapping sentence in such research and which is included in this Research Topic In order to interrogate these structural hypotheses quantitative data analysis procedures are employed such as Smallest Space Analysis SSA and Partial Order Scalogram Analysis by base Coordinates POSAC In SSA the structure of the content area of interest the variables that have been included in the MS can be interrogated as observations that have been made along the specified outcome range are represented geometrically as partitioned regions in a concept space related to the specific research domain Individual respondents may also be investigated in terms of their profile of facet related scores using POSAC A similar approach is employed when analysing information from qualitative facet theory research which interrogates the structural hypotheses present in the declarative mapping sentence through approaches such as content and narrative analyses This Research Topic presents work from scholars with particular emphasis upon how the approach has developed both theoretically and in terms of its application new areas of application and advances in theory development
