Beach Nourishment Juan J. Munoz-Perez,Luis Moreno,2021-09-08 Erosion is experienced by most coastlines worldwide and it is usually attributed not only to sea level rise but also to the retention of sand in dams the occupation of dry beaches by urbanized areas the mining of sand as a building material for construction and so on Beach nourishment has evolved as the favored erosion mitigation strategy in many areas of the world The increasing number of people living on the coast the safety of those people and the high values of coastal properties are all factors that have made beach nourishment a cost effective strategy for managing erosion in many locations However a new scenario of sand scarcity and environmental care has arisen in recent decades There have been many different and interesting cases of various aspects of beach nourishment in recent years The purpose of this invited Special Issue is to publish the most exciting experience and research with respect to this topic Thus novel techniques for designing executing and controlling these kinds of works as well as different case studies and their monitoring results and conclusions have been included in order to present an updated state of the art for marine scientists researchers and engineers

GIS and Spatial Analysis Jorge Rocha,Eduardo Gomes,Inês Boavida-Portugal,Cláudia Viana,Linh Truong - Hong,Anh Phan,2023-07-12 The objective of spatial analysis techniques is to describe the patterns existing in spatial data and to establish preferably quantitatively the relationships between different geographic variables The notion of spatial analysis in a Geographic Information Systems GIS environment encompasses the idea of integrating spatial data and alphanumeric attributes and translating it into a series of functions related to selection and data search on the one hand and with modeling

on the other There have been substantial advances in spatial analysis techniques in GIS mainly in the form of more faithfully apprehending the relationships inherent to the geographic phenomenon something that was proven impossible to do with non spatial techniques Nowadays spatial analysis involves a set of techniques used to analyze and model variables with distribution in space and or time The new era of spatial analysis must also consider the possibilities of integrating artificial intelligence in simulation geosimulation processes in computerized environments geocomputation in close relationship with models developed in real situations GIS have emerged as useful tools in geographic modeling processes helping to answer questions about the time variability of the landscape structure study the behavior of fire predict areas of urban expansion analyze propagation phenomena model animal movement and behavior and determine periods and areas of high risk of flooding among other phenomena GIS and Spatial Analysis is a critical book that provides different methodologies that combine the potential data including Big Data analysis with GIS applications It gives readers a comprehensive overview of the current state of the art methods of spatial analysis focusing both on the new philosophical and theoretical foundations for spatial analysis and on a flexible framework for analysis in the real world for problems such as complexity and uncertainty
