Biomechanics, Sensing and Bio-inspired Control in Rehabilitation and Wearable Robotics Wujing Cao, Zirui Lan, Ningbo Yu, Keyi Wang, Wenwei Yu, 2024-12-11 Research on biomechanics sensing and bio-inspired control is vital for progressing rehabilitation and wearable robotics Biomechanical simulation can provide the theoretical basis for device design and optimize the design and control scheme The fusion of bio signals neural signals and physical signals is helpful for accurate perception and recognition of human motion intention Bio-inspired control is an important direction of individualized and efficient assistance of rehabilitation and wearable robotics In recent years with the development of biomedical and information technology the equipment used for information acquisition has been updated from cumbersome and immobile devices to small and portable ones making integration with rehabilitation and wearable robotics easier Moreover the performance of rehabilitation and wearable robotics can be quantified by changes in biomechanics and through the use of biosensors The proposed Research Topic invites theoretical and experimental research dealing with novel techniques for quantifying biomechanics sensing and bio-inspired control in rehabilitation and wearable robotics For example the use of biologically inspired actuators no longer requires rigid supports as the skeletal system can be used to that end the application of synergies or motor primitives has led to a reduction in the number of actuators or to improve their control The latest advances in modeling and simulation made it possible to assess and control fatigue or simulate using such devices outside of a clinical environment These research achievements enable a new generation of rehabilitation and wearable robotics

The Handbook presents a systematic and extensive coverage of the primary areas of research and development within VE technology. It brings together a comprehensive set of contributed articles that address the principles required to define system requirements and design, build, evaluate, implement, and manage the effective use of VE applications. The contributors provide critical insights and principles associated with their given area of expertise to provide extensive scope and detail on VE technology. After providing an introduction to VE technology, the Handbook organizes the body of knowledge into five main parts. System Requirements specifies multimodal system requirements including physiological characteristics that affect VE system design. Design Approaches and Implementation Strategies addresses cognitive design strategies, identifies perceptual illusions that can be leveraged in VE design, discusses navigational issues such as becoming lost within a virtual world, and provides insights into structured approaches to content design. Health and Safety Issues covers direct physiological effects, signs, symptoms, neurophysiology, and physiological correlates of motion sickness, perceptual and perceptual motor adaptation, and social concerns. Evaluation addresses VE usability, engineering, and ergonomics, human performance measurement in VEs, usage protocols, and provides means of measuring and managing visual, proprioceptive, and vestibular aftereffects as well as measuring and engendering sense of presence. Selected Applications of Virtual Environments provides a compendium of VE applications. The Handbook closes with a brief review of the history of VE technology.
